**"Community Radio Consultation"**

We are sure it will improve society by providing local communities to communicate and come together

As we are based in London Borough of Hounslow there is a lack of communication by radio in local community to the society

Our aims are to target local youths and community to come forward to take part and train as Studio Engineers, Recording Music, Creating Music, Jingles etc Later we will be expanding in Video filmmaking.

Which will give them the opportunity to work and show their hidden talent in local community

Filming will be done outside with local community making news documentaries then editing in the Video Suite in the studio

These will diversify youth off the streets, drugs and mischievous

We would like to take this opportunity to build a "**Local Community Radio Station**" in London Borough of Hounslow offering the community and the youth opportunities to take part and learn to be presenters by meeting other radio presenters from other local radio stations we invite.

Commercials and sponsorships just limited enough, will encourage and challenge youth to go out and talk to local businesses to make commercials jingles etc

On radio it will be more challenging to use both studio and create music to make it effective

And maybe some funds for their expenses for them to do more work

We will encourage them to pre-record their programmes first in the studio before they transmit on the radio as it is already recorded

Local businesses will support their local community and the youth off the streets

Your support in this project will be very much appreciated by the local community and the youth

Achievements, The Targets, Public opinion and some sort of yearly reports will be very encouraging for the people involved and some sort of winning prize to go with it.

Yours sincerely,

R S Sahota
