

**RECOMMENDED LAND MOBILE ARRANGEMENTS IN THE FREQUENCY BANDS  
BETWEEN 30 AND 1900 MHz**

(Reference: Footnote UK8)

The recommended pattern of use by the land mobile service operating within the frequency range 30 to 960 MHz in the United Kingdom is given below.

When co-ordination with neighbouring countries is required it should be noted that, whilst these recommended plans in general match the pattern of use in the Republic of Ireland, in the case of Belgium, France and the Netherlands some land mobile arrangements are different.
