UK Interface Requirement 2052

Ground based VHF radio equipment for analogue voice and ACARS data link in the aeronautical mobile (R) service.

Publication date: Feb 2006
Date amended: January 2018

2015/1535/EU Notification number:

Section 2

Foreword

2.2 Nothing in this UK Radio Interface Requirement shall preclude the need for equipment to comply with Directive 2014/53/EU.

2.3 Nothing in this UK Radio Interface Requirement shall preclude the need for equipment to comply with Annex 10 to the convention on International Civil Aviation, where appropriate.

2.4 It is required by the Wireless Telegraphy Act 2006 that no radio equipment is installed or used in the UK except under the authority of a licence granted by or otherwise exempted by regulations made by Ofcom. It is a condition of such a licence or exemption regulations as appropriate that, in order to be installed or used in the UK, the equipment must meet the minimum requirements specified in this UK Interface Requirement for the stated equipment types and for the stated frequency bands. Nothing in this UK Interface Requirement shall preclude equipment from being placed on the market in the UK that complies with the 'essential requirements' specified in Directive 2014/53/EU.

2.5 The requirements given in the main body of this UK Radio Interface Requirement will apply to ground based VHF AM(R)S radio equipment in the UK.

2.6 This UK Radio Interface Requirement will be revised as necessary, for example to follow:

   i) current technology developments for reasons related to the effective and appropriate use of the spectrum in particular maximising spectrum utilisation; and

   ii) changes to the available spectrum allocated for aeronautical mobile (R) service.

2.7 All UK Radio Interface Requirements notified under Directive 2015/1535/EU will be published and will be made available free of charge from the Ofcom web-site at http://www.ofcom.org.uk

2.8 Further information on this UK Radio Interface Requirement can be obtained from the technical enquiry contact given at the back of this document.
Section 3

Minimum requirements for operation within the UK

3.1 The minimum requirements in this document are made for reasons related to the effective and appropriate use of the radio spectrum, in particular maximising spectrum utilisation.

3.2 This UK Radio Interface Requirement gives a high level description of how the spectrum in the UK is used for ground based VHF AM(R)S radio equipment in the aeronautical mobile (R) service. It does not prescribe technical interpretation of the ‘essential requirements’ of Directive 2014/53/EU.

3.3 This UK Radio Interface Requirement therefore stipulates the necessary equipment parameters for the licensing of ground based VHF AM(R)S radio equipment in the UK. Table 3.1 contains the relevant equipment parameters. These taken together with the ‘essential requirements’ detailed in Article 3.2 of Directive 2014/53/EU constitute the minimum requirements for the installation and use of ground based VHF AM(R)S radio equipment in the aeronautical mobile (R) service within the UK. Nothing in this UK Interface Requirement shall preclude equipment from being placed on the market in the UK that complies with the ‘essential requirements’ specified in Directive 2014/53/EU.

3.4 The technical parameters specified in the UK Radio Interface Requirement are applied to achieve the desired level of compatibility within the aeronautical mobile (R) service and with other radiocommunications services, whilst promoting enterprise, innovation and competition.

3.5 This UK Radio Interface requirement provides the necessary technical information which facilitates access to the aeronautical mobile (R) spectrum by making clear the assumptions that are made in planning the use of the aeronautical mobile spectrum in the UK. It is not the intention of this UK Radio Interface Requirement to duplicate or impose any additional ‘essential requirements’ of Directive 2014/53/EU on products. Any specified parameters within this document are for the purpose of identifying product options and not as a national de facto product requirement.
Table 3.1: Minimum requirements for the use of ground based VHF aeronautical radio equipment for analogue voice and ACARS data link communications.

<table>
<thead>
<tr>
<th>Mandatory Elements (1-9)</th>
</tr>
</thead>
</table>
| 1 | Frequency band (or bands) | 108.000 – 117.975 MHz<sup>1</sup>  
117.975 – 137 MHz |
| 2 | Radio service | Aeronautical Mobile(R) service |
| 3 | Application | Aeronautical communications: AGA<sup>2</sup> communications (civil) and SAR<sup>3</sup> (communications) |
| 4 | Channelling modulation | Analogue Voice: 25 kHz 6K80A3EJN and 8.33 kHz 5K00A3EJN, ACARS<sup>4</sup> Data Link 25 kHz 13K0A2DAN. In accordance with ICAO Annex 10 (Ref 1.1), as relevant. |
| 5 | Transmit power limit<sup>5</sup> | For each individual licence / frequency assignment, either the maximum and minimum field strength at the limit of DOC<sup>6</sup> may be specified or the maximum effective radiated power (e.r.p.). |
| 6 | Channel occupation rules | Analogue Voice: SELCAL<sup>7</sup> equipment may be used to provide selective calling; Data Link: ACARS uses CSMA<sup>8</sup> protocol. In accordance with ICAO Annex 10 (Ref 1.1), as relevant. |
| 7 | Duplex type/ separation | Single channel simplex and offset frequency simplex |
| 8 | Licensing Regime | Aeronautical ground station - Individual, operator’s certificate required for some licences, call signs may also need to be issued<sup>9</sup>. |
| 9 | Additional essential requirements | Article 3.3g Emergency – May be applied in future to aeronautical radio equipment used at offshore aeronautical stations, for traffic and logistics communications with helicopters and other aircraft and for communications on the emergency frequency 121.500 MHz and auxiliary frequency Search and Rescue 123.100 MHz, in the same environment as similar maritime radio equipment. |

---

<sup>1</sup> The use of this band by the Aeronautical Mobile (R) service is subject to agreement obtained under the procedures in Article 14 of the Radio Regulations. The band should not be used for this purpose until it is no longer required for Aeronautical Radionavigation.

<sup>2</sup> AGA – Air-Ground-Air communications.

<sup>3</sup> SAR – Search and Rescue

<sup>4</sup> Aircraft Communications Addressing and Reporting System

<sup>5</sup> Radio site clearance considerations may impose restrictions on maximum power use on certain frequency assignments. (Radio site clearance is required for any aeronautical station with an e.r.p. greater than 18dBW (50W) and/or antenna height greater than 30 metres above ground level, or where an existing structure is increased in height by greater than 5 metres.)

<sup>6</sup> DOC - Designated operational coverage (See ITU RR 45.1.1)

<sup>7</sup> SELCAL – Selective Calling

<sup>8</sup> CSMA – Carrier Sense Multiple Access

<sup>9</sup> See Reference 1.4 Schedule 6 Aeronautical Parts 1, 2 & 3 for limitations on WT Act Licences

Section 4

Additional performance parameters

(ininformative)

It is suggested that manufacturers refer to the appropriate volumes of Annex 10 to the Convention on International Civil Aviation, aeronautical telecommunications, as amended, for relevant manufacturing standards and guidelines. [www.icao.int](http://www.icao.int).

ETSI EN 300 676 V1.3.1 (2003-03) European Standard (Telecommunications series) 'Electromagnetic compatibility and Radio spectrum Matters (ERM); Ground-based VHF hand-held, mobile and fixed radio transmitters, receivers and transceivers for the VHF aeronautical mobile service using amplitude modulation; Technical characteristics and methods of measurement'.

Equipment which complies with this radio interface specification is additionally subject to the putting into service provisions of Article 10.1 of Regulation (EC) No. 552/2004 of 10 March 2004 on the interoperability of the European Air Traffic Management Network (the Interoperability Regulation)
