Power Density: Radio frequency Non-Ionizing Radiation

"... the possibility of harm from exposures [to low levels of radio frequency radiation] insufficient to cause important heating of tissues cannot yet be ruled out with confidence. Furthermore, the anxieties that some people feel when this uncertainty is ignored can in themselves affect their well-being."

> Sir William Stewart (Chairman) Mobile Phones and Health: A report from the Independent Expert Group on Mobile Phones, (The Stewart Report, 2000)

Power Density: Definition

Above 30 MHz, the usual unit of measurement is power density, though electric and magnetic fields can also be measured. It is usually expressed in milli- or microwatts per square centimetre (mW/cm2 or μ W/cm2), and is defined as the amount of power per unit area in a radiated microwave field or other type of electromagnetic field.

Introduction

Research from abroad, partially replicated (and in some instances expanded on) by scientists in English speaking countries, indicates many potential benefits in health, wellbeing and work productivity can be obtained from developing a more comprehensive understanding of potential EMF bio-effects. They also indicate ways in which present communications systems, and the electromagnetic nature of the microenvironments individuals occupy, can be improved to benefit all. It is suggested that the potential cost benefits of adopting improved EMF-hygiene protocols and developing new generations of technology that can actually improve biological functioning and human performance is immense, makes tremendous commercial sense and present enormous commercial opportunities.

As can be seen in the following table, both beneficial and detrimental biological effects are indicated at exposure levels far lower than those required for 'thermal effects', the traditional marker used to set many guidelines on presently 'acceptable' power density levels.

The Precautionary Principle/Approach?

'... [the] actions taken under the precautionary principle should be commensurate with anticipated risks of health detriment.'

Section 6.14 The Stewart Report, 2000

The need for additional impartial scientific research appears warranted to address such concerns for everyone's benefit and that of the planet...

Power Density – International Regulations and Possible Biological Effects

10 μW/cm ^z	Maximum permitted exposure levels for base stations inside and outside of living, public and industrial areas for 300- 2400 MHz frequencies (Russian Federation, since 1 June 2003)	Hygienic requirements for siting and exploitation of land mobile telecommunication systems, SanPiN 2.1.8/2.2.4.1190-03 (2003), Ministry of Health of Russian Federation / Russian Ministry of Health Protection, SanPiN (Sanitary and Epidemiological Norms). (Standard for siting and using 27-2400 MHz land mobile phone systems in the Russian Federation).
10 μW/cm²	Impaired / reduced short-term memory function and significant differences in visual reaction time (1170 test subjects).	H. Chiang, G.D. Yao, Q.S. Fang, K.Q. Wang, D.Z. Lu and Y.K. Zhou (1989), Health effects of environmental electromagnetic fields. <i>J. Bioelectricity</i> 8(1):127-131.
10.0 µW/cm ²	Decreased size of litter, increased number of stillborns in mice	II'Chevich (reported in McRee 1980), cited by A. Firstenberg 2001.
≤10 μW/cm² (max. mean exposure)	Sperm counts of Danish military personnel operating mobile ground-to-air missile units, which used several RFR emitting radar systems, were significantly lower than controls.	N.H. Hjollund, J.P. Bonde, J. Skotte (1997), Semen analysis of personnel operating military radar equipment. <i>Reprod Toxicol</i> 11(6):897, cited by www.energyfields.org/science/CWTI.RFR_studies_2.02.do c
10.0 μW/cm ²	Redistribution of metals in the blood, bones, brain, heart, liver, lungs, kidney, muscles, spleen and skin	O.I. Shutenko, I.P. Kozyarin and I.I. Shvayko (1981), Effects of superhigh frequency electromagnetic fields on animals of different ages. <i>Gigiyena i Sanitariya, no.</i> 10:35- 38, JPRS 84221, pp. 85-90, cited by A. Firstenberg 2001.
10 μW/cm²	Damaged mitochondria, nucleus of cells in hippocampus of brain	V.S. Belokrinitskiy (1982), Destructive and reparative processes in hippocampus with long-term exposure to nonionizing microwave radiation. <i>Bulletin of Experimental Biology and Medicine</i> 93(3):89-92, cited by A. Firstenberg 2001.
10 µW/cm ²	Altered brain permeability	W.R. Adey (1982).
10 – 25 μW/cm²	Changes registered in hippocampus of the brain	Belokrinitskiy, 1982, cited by Sage 2004 'Destructive and reparative processes in hippocampus with long-term exposure to nonionizing radiation.' In U.S.S.R. Report, Effects of Nonionizing Microwave Radiation, No. 7, JPRS 81865, pp. 15-20.
10 – 100 μW/cm ²	RFR at low intensities (0.0027- 0.027 W/kg) induced behavioural and endocrine changes in rats. Decreases in blood concentrations of insulin and testosterone reported, though CW microwaves had no influence on insulin secretion. Inhibition of behaviour by microwaves may depend on strength, exposure time and inhibitory effects on nervous system. Activation correlated with decreases in serum concentrations of insulin and testosterone.	M.A. Navakatikian, L.A. Tomashevskaya (1994), Phasic behavioral and endocrine effects of microwaves of nonthermal intensity. In 'Biological Effects of Electric and Magnetic Fields, Volume 1,' D.O. Carpenter (ed) Academic Press, San Diego, CA, pp.333-342, cited by www.energyfields.org/science/CWTI.RFR_studies_2.02.do c
20 μW/cm²	Changes in brain wave patterns caused by microwave or radio frequency radiation	C.H. Dodge and Z.R. Glaser, 1977. 'Trends in non-ionizing electromagnetic radiation bio-effects research and related occupational health aspects', <i>Journal of Microwave Power</i> , 12, 4 (1977)), cited by P. Bentham (1991), VDU Terminal Sickness: Computer health risks and how to protect yourself, Green Print, London, ISBN 1 85425 043 4.

20 μW/cm ²	Pulsed RF radiation (900 MHz with 217 Hz pulse) slightly elevated cortisol serum level (cortisol is a hormone involved in stress reactions). The increase was transient, suggesting adaptation to the stimulus by the subject. No significant effects found for growth hormone, luteinizing hormone or melatonin under field exposure compared to control condition. The EEG sleep-data revealed no significant variations on exposure, although there was a trend for suppressed REM.	K. Mann, P. Wagner, G. Brunn, F.Hassan, C. Hiemke and J. Roschke (1998), Effects of pulsed high-frequency electromagnetic fields on the neuroendocrine system. <i>Neuroendocrinology</i> 67(2):139-144.
25 μW/cm² at 300 MHz-300 GHz.		-hour day (occupational standard introduced in 1986) of energy absorbed and permits exposures for shorter ited by C.W. Smith & S. Best (1989).
27 μW/cm ²	Standards in the former USSR for permissible exposure levels to 0.3-3 MHz for 8-hour Workday.	Yu.D. Dumanskiy and V.Ye. Prokhvatilo (1979), Electromagnetic field of industrial frequency as a factor in the environment and its hygienic regulation. <i>Gigiena i</i> <i>sanitariya</i> 5:72-74, cited by Kositsky et al 2001.
30 μW/cm ² (0.015 W/Kg SAR)	Elevation of PFC count (antibody producing cells) in immune system	B. Veyret, C. Bouthet, P. Deschaux, R. de Seze, M. Geffard, J. Joussot-Dubien, M. le Diraison, JM. Moreau and A. Caristan (1991), Antibody responses of mice exposed to low-power microwaves under combined, pulse and amplitude modulation,' Bioelectromagnetics 12: P 47-56), cited by Sage 2004.
30 µW/cm ²	Increased brain-amine levels	W.R. Adey (1982).
32.5 µW/cm ²	102 nd Floor, Empire State Building in New York	R. Tell & N. H. Hankin (1978), 'Measurements of Radio Frequency Field Intensity in Buildings with Close Proximity to Broadcast Systems', ORP/EAD 78-3, U.S. Environmental Protection Agency, Las Vegas.
50 µW/cm²	Exposure Limit in Auckland, New Zealand as at 2001	A. Firstenberg (2001).
50 μW/cm ²	18% reduction in REM sleep, which is important to learning and memory	Mann <i>et al.</i> , 1996, cited by Sage 2004. Effects of pulsed
	functions	high-frequency electromagnetic fields on human sleep. Neuropsychobiology 1996;33:41-7.

<1,000 - 4,500 µW/cm ² (0-45 mW/cm ²)	Beneficial effects noted in transient, reversible and dose-dependent alterations in rates of blastic transformation of unstimulated lymphocytes of hamsters after 15 minutes of irradiation of 2.45 GHz CW field for 5 day period.	A.T. Huang, M.E. Engle, J.A. Elder, J.B. Kinn and T.R. Ward (1997), The effect of microwave radiation (2450 MHz) on the morphology and chromosomes of lymphocytes, Radio Science, 12, Supplement 6, pp. 173- 177, cited by W.R. Adey, 1982.

<1,000 µW/cm²	Change in bioelectric activity of human muscles during deep stages of hypnosis after 10-20 second exposure at 57-78 GHz	S.I. Gerashchenko, O.I. Pisanko and Yu.N. (1991) Mus'kin, Some physiological reactions of organisms under the influence of EHF radiation. <i>Apparatniy kompleks</i> <i>'Elektronika-KVCh' I yevo primenenie v meditsine.</i> , L.G. Gassanova,ed. Moscow, 156 pp. NPO 'Saturn, Kiev, pp. 65-71, cited by Kositsky et al 2001.
600 μW/cm² at 900 MHz	- FCC Exposure Limit in USA (FCC OET65:1	997-01 based on NCRP report No.86)
1000 μW/cm² at 1800 Μ report No.86)	Hz – FCC Exposure Limit in uncontrolled env	ironment in USA (FCC OET65:1997-01 based on NCRP
1,000 μW/cm²	ODC activity increased up to 50% in human melanoma cells (450-500 MHz at 16 Hz).	W.R. Adey et al., Studies on ornithine decarboxylase (ODC), an enzyme essential for cell growth through DNA synthesis, cited by B.B. Levitt (1995), <i>Electromagnetic Fields: A Consumer's Guide to the Issues and How to Protect Ourselves.</i>
1000 μW/cm² Occupational exposure (average)	ICNIRP public guidance levels at 400 MHz (TETRA) and 28 V/m. ICNIRP (& UK) Standard Guidance is based on power levels averaged over 6 minutes.	Alasdair Philips, Report 2213, Report regarding Microwave Emissions from the T-Mobile (UK) cellular telephone base station at James Stockdale Ltd, Ratten Row, Seamer, Nr Scarborough with respect to any possible adverse health effects. 24th July 2002
1000 μW/cm²	At 2,450 MHz, maximum specific absorption rate (SAR) for energy of 2.0 W/kg occurs in outer 1.0cm of phantom head (dummy head used for testing).	H.N. Kritikos and H.P. Schwan (1972), Hot spots generated in conducting spheres by electromagnetic waves and biological implications. IEEE Transactions on Biomedical Engineering, 19 (1), 53-58. Cited by W.R. Adey (1982), 'Tissue Interactions with Nonionizing Electromagnetic Fields,' Physiological Reviews, 61(2), 435-51.
1000 µW/cm²	At 918 MHz, energy absorption at centre of head is 0.45 W/kg.	W.R. Adey (1982), 'Tissue Interactions with Nonionizing Electromagnetic Fields,' Physiological Reviews, 61(2), 435-51.
2000 μW/cm²	Australian Standard public exposure level – Radiofrequency Radiation Part 1: Maximum Standards Australia.	Australian Standard AS2772.1. (1990) Exposure Levels 100 kHz to 300 GHz. Sydney:
700-2,800 μW/cm²	EEG changes resembling those induced by hallucinogenic drugs noted in rabbits exposed to 9.3 GHz radiation for 5 minutes. Change noted 10 minutes after exposure with decreased total integrated EEG lasting ≤15 minutes.	L. Goldstein and Z. Sisko (1974), A quantitative electroencephalographic study of the acute effects of X- band microwaves in rabbits. In: <i>Biological effects and</i> <i>health hazards of microwave radiation</i> (P. Czerski, Ed.), p. 128-133. Warsaw: Polish Medical Publishers. Cited by R.O. Becker and A.A. Marino (1982), <i>Electromagnetism &</i> <i>Life</i> , State University of New York Press, pp. 211, ISBN: 0873955609, www.ortho.lsuhsc.edu/Faculty/Marino/EL/ELTOC.html
1,000-5,000 μW/cm2 above 300MHz	The American National Standard Institution's vo at 1989, cited by C.W. Smith and S. Best (1989	pluntarily required limit for worker and public exposures as
2,600 μW/cm ²	Maximum exposure in school with base station on roof. Maximum power density of 0.01 μ W/cm ² measured at two schools without nearby base stations.	A. Thansandote, G.B. Gajda and D.W. Lecuyer (1999), Radiofrequency radiation in five Vancouver schools: exposure standards not exceeded. Canadian Medical Association Journal, 161(10), pp. 1311-1312.
5,000 µW/cm²	Increased bone marrow cellularity in mice exposed to a 2.88 GHz field (SAR 2.3 W/kg) for 80-400 hours – effect not noted at 10,000 μ W/cm ² indicating possible window effect.	H.A. Ragan and R.D. Philips (1978), Hematologic effects of mice exposed to pulsed and CW microwaves. In: Proc. Int. Union Radio Sci., Symp. On Biologic Effects of Electromagnetic Waves, Helsinki, p. 48, cited by W.R. Adey, 1982.
5,500 μW/cm²	Exposing developing chick embryos to 428 MHz radiation for >20 days caused lethal and/or teratogenic effects and delayed hatching.	K. Saito and K. Suzuki (1991), Lethal and teratogenic effects of long-term low-intensity radio frequency radiation at 428 MHz on developing chick embryo. Teratology, 43, pp. 609-614.
6400 μW/cm² Public exposure (peak)	ICNIRP public guidance levels at 400 MHz (TETRA) and 28 V/m. ICNIRP (& UK) Standard Guidance is based on power levels averaged over 6 minutes, cited by A. Philips 2002.	
2,640 µW/cm ² at 400 MHz – General Public Exposure Limit in UK (NRPB, 1993) (TETRA operates at 400 MHz)		
3,300 µW/cm ² at 900 MHz – old UK General Public Exposure Limit to June 2000). Now ICNIRP is used for 900 MHz		

31,000 ±5,000 μW/cm ² (Peak values)	Exposure of BALB/c mice to 42.2 GHz fields (with peak specific absorption rate (SAR) at skin of 622±100 W/kg) for 30 minutes daily for 3 days found to ameliorate the immunosuppressive effects of cyclophosphamide (CPA) – a regularly used anticancer drug – by augmenting proliferation of splenocytes and altering activation and effector functions of CD4 ⁺ T cells.	V. Makar, M. Logani, I. Szabo, and M. Ziskin (2003), Effect of Millimeter Waves on Cyclophosphamide Induced Suppression of T Cell Functions, Bioelectromagnetics 24:356–365.
4,000 μW/cm²	Threshold for neuroendocrine effects	W.R. Adey (1982).
5,000 μW/cm²	FCC threshold in controlled environment.	Luxorion, Electromagnetic radiations and your health, www.astrosurf.com/luxorion/qsl-em-radiation
6400 μW/cm² Public exposure (peak)	ICNIRP (& UK) public guidance levels at 400 MHz (TETRA) and 28 V/m. based on power levels averaged over 6 minutes.	A. Philips (2002), Report 2213, Report regarding Microwave Emissions from the T-Mobile (UK) cellular telephone base station at James Stockdale Ltd, Ratten Row, Seamer, Nr Scarborough with respect to any possible adverse health effects.
<10,000 µW/cm²	EHF EMR capable of changing functional condition of living organisms	O.I. Pisanko, V.I. Pyasetskiy and Yu.N. Mus'kin (1991), Questions of hygienic standardization of EHF radiation. <i>Apparatniy kompleks 'Elektronika-KVCh' i yevo</i> <i>primenenie v meditsine</i> . L.G. Gassanova, ed. Moscow, 156 pp. NPO 'Saturn,' Kiev, pp. 18-24, cited by Kositsky et al., 2001.
10,000 μW/cm² at 1800 MHz	Old UK General Public Exposure Limit to Ju Now ICNIRP is used for 1800 MHz, cited by A.	ne 2000). Firstenberg 2001.
10,000 μW/cm ^²	Exposure level recommended as safe by the NRPB for the frequency range 30 to 30,000 MHz (as at 1991) was 10 mW/cm ² or, 1 mW hour/cm ² , during any 1 hour period. The NRPB did not include considerations relevant to small children.	
10,000 µW/cm²	Molecular and genetic effects (thermal)	W.R. Adey (1982).
10,000 μW/cm ²	Exposure to 2450 MHz radiation for 90 minutes produced activation of the hypothalamic-pituitary-adrenal axis and increased oestradiol in both virgin and pregnant rats, suggesting microwaves may greatly stress pregnant organisms.	H. Nakamura, T. Seto, H. Nagase, M. Yoshida, S. Dan and K. Ogino (1997), Effects of exposure to microwaves on cellular immunity and placental steroids in pregnant rats. Occup Environ Med 54(9), pp. 676-80, cited by A. Marino, www.niehs.nih.gov/emfrapid/extrmurabs/marino.html
10,000-30,000 µW/cm ²	Chickens exposed at pulse repetition rate of 8,000 pulses per sec and frequency of 16,000 Mc/s. Birds all exhibited a startled reaction at radiation onset, sustained extensor activity of wings and legs also noted. Similar findings obtained with pigeons and seagulls. Note: ICNIRP levels are 200 μ W/cm ² at 400 MHz rising to 1000 μ W/cm ² at 2 GHz	J.A. Tanner (1966), Effect of Microwave Radiation on Birds, Nature, pp. 636.
10,000 µW/cm ²	No detectable ocular damage to the eyes of rabbits and non-human primates after either single 8-hour exposure to 60 GHz CW radiation or five separate 4-hour exposures on consecutive days.	H.A. Kues, S.A. D'Anna, R. Osiander, W.R. Green and J.C. Monahan JC (1999), Absence of ocular effects after either single or repeated exposure to 10 mW/cm ² from a 60 GHz CW source. Bioelectromagnetics 20(8), pp.463-473.
1000 –10,000 μ W/cm ²	Exposure limit in UK as at 2001.	A. Firstenberg (2001).
10,000 µW/cm ^z	US Occupational Safety and Health Administration's standard as at 1989	C.W. Smith & S. Best (1989), Electromagnetic Man: Health & Hazard in the Electrical Environment, J.M. Dent & Sons Ltd., London, ISBN 0-460-86044-5.
13,300 μW/cm^² (Average Power Density)	Millimeter wave treatment (MMWT) is widely used in Eastern Europe. Among reported beneficial effects is suppression of melanoma growth. Tests on mice injected with B16 melanoma cells used 15-minute exposures (at 61.22 GHz). 5 daily exposures found to suppress subcutaneous tumour growth if started 5 days after inoculation; though if course started on day 1 or day 10 following inoculations they were ineffective.	A.A. Radzievsky, O.V. Gordiienko, I. Szabo, S.I. Alekseev, and M.C. Ziskin (2004), Millimeter Wave-Induced Suppression of B16 F10 Melanoma Growth in Mice: Involvement of Endogenous Opioids, Bioelectromagnetics 25:466–473.

20,000-50,000 µW/cm ²	Exposed chickens respond with escape or avoidance reactions within seconds of radiation onset.	J. A. Tanner, C. Romero-Sierra and S. J. Davie (1967), Non-thermal Effects of Microwave Radiation on Birds, <i>Nature</i> 216, pp. 1139.
25,000 μW/cm²	Young chicks became weak on entering pulsed 16 GHz fields. Some collapsed to cage floor (where field intensity shown was registered) until radiation switched off. Collapse time (5-20 seconds) varied with chicks' orientation in field. Induced panting continued briefly after field removed. Drowsiness also noted.	C. Romero-Sierra, J.A. Tanner, J. Bigu del Blanco (1973), Interaction of Electromagneticfields And Living Systems With Special Reference To Birds, Control Systems Laboratory, Division of Mechanical Engineering / Division de Génie Mécanique, Canada, Report LTR-CS-113, presented to International Symposium on Biological Effects and Health Hazards of MW Radiation, World Health Organization, Warsaw, October 1973, 37 pp.
28,000 μW/cm²	Teratogenic and tumour causing effects	W.R. Adey (1982), 'Tissue Interactions with Nonionizing Electromagnetic Fields,' Physiological Reviews, 61(2), 435-51.
32,000 μW/cm² Occupational exposure (peak)	ICNIRP public guidance levels at 400 MHz (TETRA) and 28 V/m. ICNIRP (& UK) Standard Guidance is based on power levels averaged over 6 minutes.	Alasdair Philips, Report 2213, Report regarding Microwave Emissions from the T-Mobile (UK) cellular telephone base station at James Stockdale Ltd, Ratten Row, Seamer, Nr Scarborough with respect to any possible adverse health effects. 24 th July 2002.
40,000-165,000 μW/cm²	Dogs avoid exposure to 2800 MHz radiation at these intensities	S. Michaelson et al., (1958). The biological effects of microwave irradiation in the dog, Proc. Second Tri-Serv. Conf. on Biological Effects of Microwave Energy, Rome, New York, p.175, cited by A.S. Presman (1970), Electromagnetic fields and life, (Translated from Russian by F.L. Sinclair). Plenum Press, New York, ISBN 0-306- 30395-7, 356pp.
45,000 μW/cm²	Dorsally stimulated adult birds exhibited behaviour ranging from immobility to initiation of both flight and collapse. Contributory factors were found to be behaviour prior to exposure, area of bird radiated and bird's location.	C. Romero-Sierra, J.A. Tanner, J. Bigu del Blanco (1973), Interaction of Electromagneticfields And Living Systems With Special Reference To Birds, Control Systems Laboratory, Division of Mechanical Engineering / Division de Génie Mécanique, Canada, Report LTR-CS-113, presented to International Symposium on Biological Effects and Health Hazards of MW Radiation, World Health Organization, Warsaw, October 1973, 37 pp.
46,000 μW/cm ² (average field intensity 0.152m above floor)	Birds exposed to 9.3 GHz radiation pulsed at 416 pps with 2.3 µsec pulse-width. Collapse of wing and legs noted at start of irradiation. Birds align themselves to outside of field, with their outer side becoming paralysed. Some exhibit hyperactivity. Escape behaviour also noted.	J.A. Tanner, C. Romero-Sierra and S.J. Davie (1967), Non-thermal Effects of Microwave Radiation on Birds, Nature, 216, (5120), pp. 1139.
50,000 μW/cm²	Almost total paralysis observed in chickens. After 10-20 seconds irradiation pigeons and seagulls showed increased signs of distress noted through defecation, vocalisation and initiation to flight.	J.A. Tanner and C. Remero-Sierra (1974), Beneficial and harmful accelerated growth induced by the action of nonionizing radiation, Annals of New York Academy of Sciences 238, pp. 171-175.
60,000 μW/cm ²	Significant differences noted in EEG patterns of birds when exposed to microwave field modulated sinusoidally at 4 Hz in comparison to non-irradiated situations.	F. Villa, C. Romero-Sierra and J.A. Tanner (1972), Changes in EEG Patterns of Birds under Microwave Radiation. NRC, DME Control Systems Laboratory Technical Report, LTR-CS-56, January 1972.
60,000 μW/cm ²	Increased diffusion rate of aqueous solutions of electrolytes through membranes noted under 10 GHz, CW microwave radiation, being most pronounced when electric field vector oriented perpendicular to plane of the membrane.	J. Bigu del Blanco, C. Romero-Sierra, J.A. Tanner and M.L. Bigu (1973), Progress Report on the Investigation of the Effects of Microwave Radiation on the Diffusion Rate of Electrolytes through Membranes II. NRC, DME Control Systems LTR-CS-73.
80,000 μW/cm²	Repeated 1 hour exposures (20-24 times) to 2.45 GHz fields caused lens opacities in the eyes of 1 of 11 rabbits tested – other studies do not find evidence of cumulative effects.	R.L. Carpenter, E.S. Ferri and G.J. Hagan (1974), 'Assessing microwaves as a hazard to the eye – progress and problems,' Biologic Effects and Health Hazards of Microwave Radiation, P. Czerski, ed., Polish Medical Publications, Warsaw, p. 178-185, cited by W.R. Adey 1982.

100,000 μW/cm²	Repeated exposures caused lens opacities in the eyes of 4 of 10 rabbits tested – other studies do not find evidence of cumulative effects. (Lens opacities of rabbits used as model for human cataract induction)	R.L. Carpenter, E.S. Ferri and G.J. Hagan (1974), 'Assessing microwaves as a hazard to the eye – progress and problems,' Biologic Effects and Health Hazards of Microwave Radiation, P. Czerski, ed., Polish Medical Publications, Warsaw, p. 178-185, cited by W.R. Adey 1982.
120,000 μW/cm²	Approximately two minutes exposure caused sudden wilting reaction in a Mimosa plant that died without reopening.	J. A. Tanner and C. Remero-Sierra (1974), Beneficial and harmful accelerated growth induced by the action of nonionizing radiation, Annals of New York Academy of Sciences 238, pp. 171-175.
120,000 μW/cm ^z	Repeated exposures caused lens opacities in the eyes of 8 of 10 rabbits tested – other studies do not find evidence of cumulative effects.	R.L. Carpenter, E.S. Ferri and G.J. Hagan (1974), 'Assessing microwaves as a hazard to the eye – progress and problems,' Biologic Effects and Health Hazards of Microwave Radiation, P. Czerski, ed., Polish Medical Publications, Warsaw, p. 178-185, cited by W.R. Adey 1982.
140,000-190,000 μW/cm²	5-10 minutes exposures at 140,000-190,000 μ W/cm ² caused plants' primary leaves to wilt. 10-30 minute exposures of most plants to 190,000 μ W/cm ² irradiation caused permanent wilting.	C. Romero-Sierra, J.A. Tanner, J. Bigu del Blanco (1973), Interaction of Electromagnetic fields And Living Systems with Special Reference To Birds, Control Systems Laboratory, Division of Mechanical Engineering / Division de Génie Mécanique, Canada, Report LTR-CS-113, presented to International Symposium on Biological Effects and Health Hazards of MW Radiation, World Health Organization, Warsaw, October 1973, 37 pp.
