

## Letter to Ofcom

### Do you Really Want to Encourage Infrastructure Investment?

- **UK Digital Communications Review** — Ofcom's Strategic Review is too good an opportunity to be wasted through lack of ambition. We see it as a chance to prevent the UK falling further behind peers which are proceeding with urban builds of fibre to the home. We also believe that Ofcom can avert the risk of a long term infrastructure monopoly or duopoly by choosing to open up the local network to more diverse competitive investment. In 2005 the UK was falling behind most European countries in consumer broadband, and the last Strategic Review responded with ULL and a functional separation of BT. This time we see the opportunity to apply passive network sharing to deliver fibre broadband services from a much more diverse range of competitors.
- **Future of access regulation most important for investors** — In this report we mainly focus on regulation of the fixed access network – the most capital hungry part of the telecoms infrastructure, with the longest asset lives, but right now also the fastest changing. In its preparation we have spoken with interested parties including CEOs and regulatory directors at listed and unlisted telecoms operators, independent regulatory specialists, former employees of Ofcom, and engineers with extensive experience of local network construction and operation.
- **Scope for Ofcom to incentivise more competitive investment** — The success of access network regulation in promoting broadband take up in the last 10 years should not cloud the issues that are emerging as technology continues to advance. While fixed and mobile networks are converging towards IP/Ethernet for access to customers large and small, regulation has become more complex and burdensome. Duct and pole sharing has been an abject failure in the UK, while the benefits of successful implementation are becoming evident in other European countries.
- **Not just for Ofcom to solve** — Passive network access is not the complete solution to deploying the broadband infrastructure of the future. In the UK key potential partners such as utilities, local government and Network Rail are not yet on board with this priority. The UK has the most restrictive planning regime in Europe, and the highest cell site costs and rents. It is no coincidence that Vodafone's Project Spring is less advanced in the UK than any other country in its footprint or that London's cell density is less than half that of other major European cities.
- **Proposals** — Broadening passive measures and addressing the inadequacies of its duct and pole sharing measure, by removing the self-defeating limitations on competitor use and properly industrialising the product, would provide a better regulatory model, and the country with more competitive infrastructure investment. We believe that wholesale price flexibility for residential fast broadband must be retained, but see full structural separation of BT as unnecessary and disruptive.

# How to Encourage Infrastructure Investment

**We think the regulator needs to develop the ground for the next ten years, during which the industry will see technology convergence displacing a lot of familiar legacy products.**

Ofcom's Strategic Review is too good an opportunity to be wasted through lack of ambition. We think the regulator needs to develop the ground for the next ten years, during which the industry will see technology convergence displacing a lot of the legacy products that Ofcom regulates today. The Strategic Review provides Ofcom with an opportunity to examine structural network-wide solutions rather than "solving individual connectivity issues as they go along", in the words of one of our interviewees.

The success of superfast broadband is re-concentrating the market to the extent that Virgin and BT between them now have 86% of superfast broadband connections (Figure 1) but only 34% in broadband at ordinary speeds (Figure 2). We recognise the risk of re-monopolisation in fixed access, which we see as potentially negative long term not just for consumers but also for investors who may, as a result, face an increasingly interventionist regulatory regime over time. We believe the answer is to take much more effective action to open up passive infrastructure such as ducts, poles and cables, so that competitors can deploy fibre local network without incurring the high costs and disruption of repeatedly re-digging the roads. This should have the benefit of lowering barriers to entry, diversifying local network suppliers and encouraging investment and innovation.

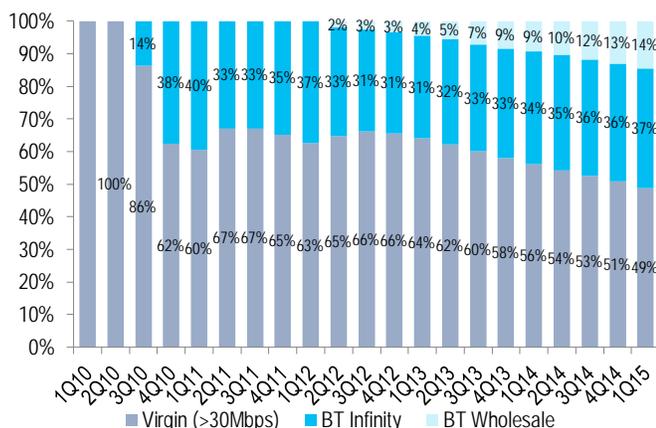

We also see the Strategic Review as a chance to head off the danger that the UK falls behind peers which are proceeding with extensive urban builds of fibre to the home. Britain's cities need to compete internationally, and a nationwide one fits all approach is neither necessary nor desirable. Residential fibre to the building, which is still scarce in the UK (Figure 5), is not only future proof but lower cost to operate than current technologies. A number of smaller UK companies including Hyperoptic, Gigaclear, Geo Networks and City Fibre (its York trial a JV with TalkTalk and Sky) are seeking to demonstrate that FTTB can be economic in the UK beyond the preconceived limits of urban business centres and new build estates.

**Based on our interviews the industry sees Ofcom's current duct and pole sharing measure as expensive and inflexible. No competitor makes any significant use of it.**

Our industry interviews made clear that competitors see Ofcom's current duct and pole sharing measure as expensive and inflexible, and the limitations on use as unfairly tilting the playing field against competitive players. The feedback is that it is not properly industrialised and that other countries do better, with good surveys and online portals to show duct availability. No competitor makes any significant use of it, and one executive said that the overheads involved in using BT's ducts adds cost of 2-3x the payments due to BT for their use. We see proper industrial implementation as essential to delivering benefits from the symmetric passive access measures envisaged under the European Broadband Directive to reduce the cost of rollout. The government says it will consult on its implementation during 2015.

Figure 3. Network schematic with principle regulated elements in residential and business access

**We believe that wholesale price flexibility for residential fast broadband must be retained, and see full structural separation of BT as unnecessary and disruptive.**

**We recognise that strong consumer demand for fast broadband has been demonstrated** and so the period of highest investment risk for superfast broadband has passed. Nonetheless, considerably more investment is needed. The priority from here should be completing rural coverage and a network wide upgrade to G.fast for BT while encouraging greater diversity of supply, particularly in cities where the UK is falling behind other countries. With this in mind we believe that wholesale price flexibility for residential fast broadband must be retained, and see full structural separation of BT as unnecessary and disruptive.

On structural separation our interviewees were predictably split, with BT against and competitors generally in favour, but we see it carrying risks for Ofcom's broader objectives. We examined the arguments in an earlier report [Open Breach – The Wrong Medicine](#). We see the timing as sub-optimal, with the risk that it throws some uncertainty over the fast broadband investment programme. We also anticipate that the point of delineation between Openreach and the rest of BT will move as local copper plant and exchanges are removed over time as the local network migrates fully to IP/Ethernet. This process, which should drive significant efficiency benefits, could be obstructed by splitting BT now.

**Ofcom may see a case for legal separation of Openreach within BT's holding company group to improve openness and accountability.**

However, Ofcom may see a case for legal separation of Openreach within BT's holding company group. This could address legitimate complaints from competitors about lack of openness, cost allocations, service quality and lack of even handedness while keeping Openreach part of BT's capex envelope and retaining enough flexibility to adapt to structural changes in time.

**We see effective passive network sharing as key to accelerating fibre deployment, increasing investment, competitiveness and innovation, improving consumer choice and heading off the risk of re-monopolisation of telecoms access.**

**The UK Government says** its role in supporting industry is to "remove barriers to investment, to cut the red tape that increases the cost of rollout, and to ensure the continuance of the stable regulatory framework that makes the UK such an attractive place to invest"<sup>1</sup>. In this context we see passive network sharing as key to accelerating fibre deployment to the next stage, increasing investment, competitiveness and innovation, improving consumer choice, and heading off the risk of re-monopolisation of telecoms access in the UK.

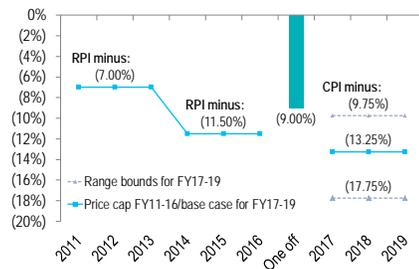

**Concerns about mobile coverage**, not-spots and signal strength show there is still much to be done in this regard. Feedback from the competitive telcos in the UK suggests that key potential partners such as utilities, local government and Network Rail are not aligned with the priority the government wishes to place on building a competitive national broadband infrastructure. Issues remain with practices in planning and other logistical areas that are uniquely obstructive in the UK.

Much of this lies outside Ofcom's remit but should be considered as part of an overall package to improve investment levels and efficiency, as well as better outcomes for consumers. Also important here, in February the Government initiated a consultation into reforming the electronic communication code, which provides the legal framework for the rollout and maintenance of telecoms networks and regulates the relationship between telecom network operators and providers of key sites. Responses were due by the end of April, and are being considered.

**We see a strategic review as an opportunity to simplify regulation in a way which may not be practical under the legislation governing Ofcom's powers and the silo structure applied by the EC.**

Ofcom has historically aimed to target regulation at a single level, however, the move to IP/Ethernet for access, both in residential and business, has contributed to multiplying layers of regulation and we believe Ofcom should aim to simplify those again over time. As (Figure 3) illustrates, both residential and particularly business access will be regulated at multiple levels post the current Business Connectivity Market Review if the terms of this May's consultation document are adopted. For business this would include passive network measures of duct and pole access (with service limitations) and dark fibre (with geographic limitations) in addition to the active service measures on leased lines and Ethernet (also with geographic limitations). Figure 4 shows the price caps on Openreach's Ethernet basket which have been tightened over time.

**We see the delivery of effective passive remedies as enabling a progressive simplification of regulatory measures on active services.** The burdensome regulatory approach in telecoms is due for some simplification and adoption of a more holistic, less siloed approach. We note that Ofcom's last 18 months or so of published decisions, consultation documents and research reports come to 5,876 pages, an average of 330 pages per month, on the telecoms sector alone.

Indeed, we see a strategic review as an opportunity to simplify regulation in a way which may not be practical under the legislation governing Ofcom's powers and the silo structure applied by the EC. The three year cycle of regulatory reviews is too short and a pause to take a more holistic perspective could deliver benefits from, for example, taking a more unified view residential and business access networks.

## Recommendations

**A strategic review is a rare moment when Ofcom's options go beyond its usual legislative limitations.**

A strategic review is a rare moment when Ofcom's options can go beyond the usual legislative limitations placed upon it, such as being quite so tied to findings of significant market power as justification for action, or being constrained by the EC's siloed market by market approach. The 2005 strategic review saw BT come to a settlement in lieu of a referral to the then Competition Commission. It did use an SMP framework and BT's undertakings from that time fall away if SMP findings are withdrawn, however, other models are possible. The settlement in lieu mechanism can result in a less piecemeal outcome than conventional regulation while, by accepting, BT avoids the delay and uncertainty of a full referral.

Our view is that regulation needs to be reformed to broaden incentives for investment, adapt to the new technological playing field and reduce regulatory overhead. We have five main suggestions.

### 1. Strengthen passive measures and simplify interventions

**Ofcom needs to address the shortcomings in its passive network provisions (ducts, poles, potentially dark fibre).**

We believe that Ofcom should set a path to a progressive simplification of the complex thicket of regulatory measures that has been building up. In order to scale back its intervention at the services level (such as business Ethernet or residential superfast broadband), Ofcom needs to address the shortcomings in its passive network provisions (ducts, poles, potentially dark fibre). We see passive network sharing as key to accelerating fibre deployment, increasing investment, competitiveness and innovation, improving consumer choice and heading off the risk of re-monopolisation of telecoms access.

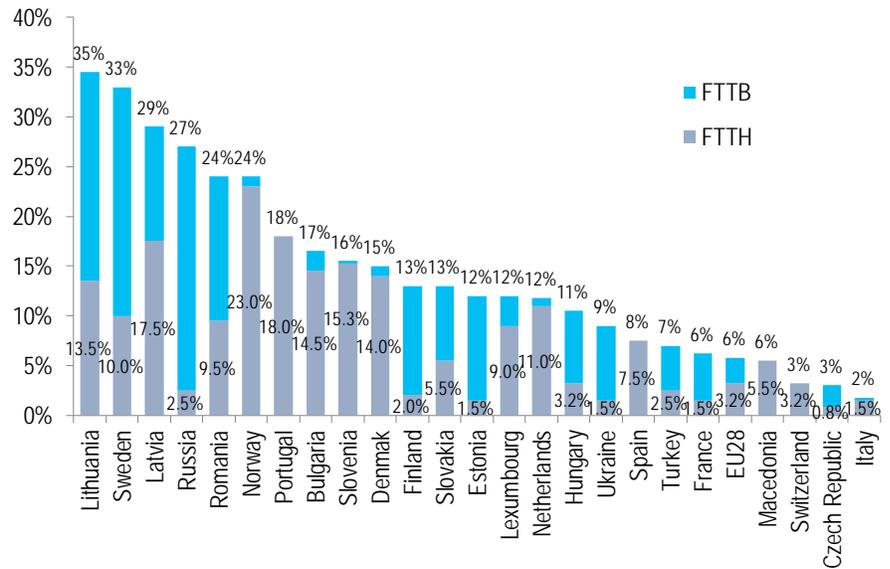

Analysys Mason, in a 2012 study for the European Commission, estimated cost savings in the range of 29-75% from deploying a network using existing passive infrastructure rather than new digging. This has the potential to accelerate fibre deployment, enable new competitive entry and broaden availability of FTTB into previously uneconomic areas. The Analysys report contributed to the harmonisation effort of the EC, and led to the European Broadband Directive to reduce the cost of rollout. The UK Government has said it will bring forward a consultation on its implementation in 2015. EU member states have until 1 January 2016 to transpose the Directive into their national legislation.

Our earlier report on this subject - [Towards an Open Duct Future](#), 26 Feb 2013 – observed that by then many countries had imposed open duct type remedies but that both the model and degree of success varied. Most successful at that point were Lithuania and Portugal, both of which have symmetric regulation requiring multiple players to make ducts available. Since then fibre build through infrastructure sharing has pressed on in France and Spain as well.

**Lithuania pioneered passive network sharing and still leads the European field with 35% take up of fibre to building for residential customers.**

Lithuania is still the most successful, leading the European field with 35% take up of fibre to building for residential customers (Figure 5). It introduced the compulsory sharing of all passive infrastructure in 2004 under a law imposing "Symmetric Obligation to share all available passive infrastructure which is suitable for construction of electronic communications networks". This included the telecoms operators, gas and electricity companies. Terms for a range of countries are shown in Figure 6.

**For the most part, use of BT's ducts by competitors is restricted in ways that BT itself, of course, doesn't face.**

**We argue the UK should catch up with other countries by moving to an online mapping of relevant Openreach infrastructure and a traffic light system for duct availability.**

**The UK has a poor record of reuse of existing facilities** and many would be suitable as a conduit for fibre optic cables, large numbers of which fit within a 20mm diameter cable, were contractual, cost and practical matters efficiently resolved.

Currently competitors can only use duct and pole sharing to install next generation access networks for multiple residential or business premises. This excludes point to point connections to single customers, leased lines and connections to industrial facilities like cell sites, local exchanges or Ethernet points of presence. We find these exclusions self-defeating as BT clearly is not operating under such constraints and these services provide a route into a broader offering for some operators.

UK companies, familiar with relatively smoothly working processes for this abroad, have commented about the lack of commitment to making this work here. One of our interviewees said that it currently costs 2-3x more to use the duct sharing in the UK than they are paying to BT for the service. Another described the duct sharing measure as expensive and inflexible, and the limitations on use as unfairly tilting the playing field against competitive players.

**Ofcom needs to fix the ineffective performance of duct and pole sharing** ("Passive Infrastructure Access") by removing these self-defeating limitations on competitor use and ensuring that it is properly industrialised. We argue the UK should catch up with other countries by moving to an online mapping of relevant infrastructure and a traffic light system for duct availability. Reports on the condition of BT's ducts are mixed, however other countries have faced similar issues and overcome them. In any case, to extend the reach of fibre network further in the UK there will need to be passable ducts, whether that fibre is installed by BT or a competitor.

**Ofcom's proposal to add wholesale dark fibre to BT's obligations** was generally welcomed by the altnet interviewees that we spoke to, although one commented that it would be a disaster if it went the way of the barely used duct sharing. Advantages cited for competitors would be that it would give them end to end network control from their own network management centres, better insight into service delivery to customer, the ability to innovate more quickly, and they would not need to move in line with BT's product roadmap for active services.

## **2. Retain wholesale price flexibility for residential fast broadband**

**We believe that wholesale price flexibility for residential fast broadband**, with a term commitment, remains important to maintain investment levels and complete the build out of fibre to the cabinet and G.fast (BT says if its trials are successful it will start to deploy G.fast in its 2016/17 financial year). The wholesale and retail prices are currently governed by a margin squeeze test to protect competitors. While we see removal of such regulatory measures on services (active elements) as desirable long term, that looks to be some way off, particularly for less densely populated areas.

## **3. Consider a legal rather than structural separation for Openreach**

Most competitor managements that we have spoken to are either overtly in favour of the structural separation of Openreach from BT or are positively disposed towards the idea. Not surprisingly BT takes the opposite view, and sees significant disadvantages and costs. We examined the arguments in an earlier report [Open Breach – The Wrong Medicine](#), 23 March 2015.

Ahead of this review Sky has called on Ofcom to make its key focus whether BT should be referred to the Companies and Market's Authority (CMA) under a Market

Investigation Reference (MIR). Its critique covers what it sees as underinvestment and poor service levels from Openreach, among other things.

**We take the view that a structural separation would be disruptive** and would not, of itself, answer the question about how regulation should encourage broadband investment and competition over the next 10 years.

**We see a high risk of re-monopolisation with the structural separation route, which in our view is not the step to take when heavy levels of investment will still be required for some time.**

It may indeed suit BT to take its time with superfast broadband roll out to perpetuate the investment-friendly fibre regulation as long as possible. As such, the government may see any threat of structural separation as a way to push BT to move more quickly. However, we see a high risk of re-monopolisation with this route, which in our view is not the step to take when heavy levels of investment will still be required for some time. Openreach is the most capital intensive part of BT, representing 69% of its capital employed and 42% of EBITDA.

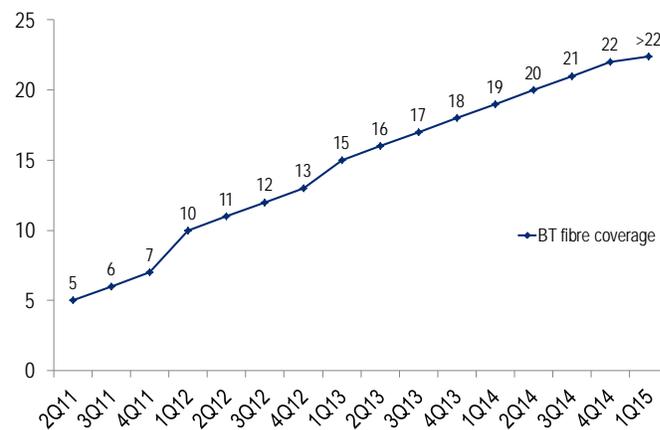

In any case progress with superfast broadband roll out has been pretty consistent (Figure 8) and Openreach's capex has lately stayed roughly flat at over £1bn pa while the BT Group's overall capex has seen a decline (Figure 7).

Figure 7. Openreach capex has been broadly stable since formation £bn, year to March, excludes spectrum

**Pressing down prematurely on the pricing of active services would risk squeezing out competitive investment.**

We believe the competitive risks would be better addressed with more effective passive network remedies and without pressing down prematurely on the pricing of active services, which would risk squeezing out competitive investment. Over time, this should allow a new model of competition to emerge, with competitors less dependent upon BT, and set an independent challenge to BT over its technology choices.

**We dispute the suggestion that Openreach is being used to fund BT's bidding for sports rights.**

Given there are no unambiguously successful international precedents for structural separation, we find the proposal risky for the authorities. We also believe that any desire to defer the end to supportive regulation would remain unchanged at an independent Openreach anyway.

In particular we dispute the suggestion that Openreach is being used to fund BT's bidding for sports rights. We do not believe that BT has any more need of Openreach to fund its sport TV ambitions than Sky does. BT Consumer generated over £1bn of EBITDA and over £0.8bn of operating FCF (EBITDA minus capex) in 2014/15, while funding its current sports rights portfolio. We expect both to dip in 2015/16 as the costs of UEFA rights are absorbed but that OpFCF for the Consumer division will not go below £645m pa in each of the next three years.

**Instead we believe Ofcom could consider putting Openreach into a legally separate entity**, within the BT holding company group. This might improve visibility in general and make it possible in a more open way to address complaints from competitors about cost allocations, quality of service and even handedness.

While Openreach is functionally separate from the rest of BT it is a division rather than having legal status of its own (e.g. as a limited company or Plc). Ofcom may also consider its governance. While Openreach is supervised by the Office of the Telecoms Adjudicator on behalf of Ofcom, its Equality of Access Board is a sub-committee of the main BT board.

Should things not work out to Ofcom's satisfaction legal separation would, in principle, reduce the preparation time needed for full structural separation later.

#### **4. Better focus of the umpire's resources**

**Ofcom's last 18 months or so of decisions, consultation documents and research reports on the telecoms sector comes to 5,876 pages, an average of 330 pages per month.**

Figure 11 shows Ofcom's last 18 months or so of decisions, consultation documents and research reports related only to the telecoms sector. This comes to 5,876 pages, an average of 330 pages per month, omitting many of the accompanying documents such as consultants' reports. This mighty page count is dominated by the Fixed Access Market Review (FAMR – residential access) and the Business Connectivity Market Review (BCMR – business access), which are among the market reviews that must occur every three years under EC rules.

This heavy resource intensity is partly a function of the overly frequent and siloed nature of the EC's market reviews and partly Ofcom's seeking to avoid legal challenge (not all European regulators go into such extensive detail).

**Grouping markets that rely on a degree of common infrastructure and extending the review period, could meet EC requirements, extend visibility and free up resource to look more closely at execution of the measures, rather than merely their design.**

We believe that this approach can exacerbate short termism and obscure the bigger picture when, for instance, two or more of the EC's "markets" share a common underlying infrastructure. We note though that the strict framework that Ofcom must follow does, of itself, provide a predictability for the investment environment. Nonetheless, grouping markets that rely on a degree of common infrastructure and extending the review period to six years with a progress check against nominated objectives at year three, could meet EC requirements, extend visibility and free up resource to look more closely at execution of the measures, rather than merely their design.

## 5. Harder to reach: mobile and pay TV

**We believe Ofcom should lend its support to addressing the numerous obstacles to improving the UK's substandard mobile infrastructure.** The government's reform of the Electronic Communications Code will be important in reducing barriers to investment. Government support may be needed more generally here to ensure that significant participants like the planning regime, local councils and Network Rail align their priorities to support the industry in deploying higher cell densities for effective 4G networks.

**Vodafone's Project Spring is less advanced in the UK than any other country in its extensive footprint. London's cell density is less than half of other major European cities.**

In mobile, Vodafone's Project Spring is less advanced in the UK than any other country in its extensive footprint. London's cell density (3G sites per sq km) is less than half of other major European cities, and mast heights are up to one third less. These shortcomings lead to poorer signal availability and depth and (ironically) having to operate the cells at higher power levels.

The UK has the most restrictive planning regime of any in Europe, the highest site costs and rents, and the most restricted access to sites than anywhere in Europe. While planning matters are not directly within Ofcom's remit, its recognition as an important part of the whole could prompt constructive moves from the government, which could go beyond its reform of the electronic communication code.

**We believe a Strategic Review would be incomplete without consideration the broader implications of pay TV in the market.**

The market has developed since the Competition Commission's comment of 2 Aug 2012 upon rejecting Ofcom's referral of Sky Movies: "In our view, competition in the pay-TV retail market overall remains ineffective but we were asked by Ofcom to look specifically at the role of first pay movie content and Sky's position with regard to these rights".

Nonetheless, the growing importance of Pay TV as, in many cases, the principle driver of the purchase decision in triple play, and potentially quad play, packages makes the role of cross selling and market power in this adjacent sector increasingly important for telecoms.

## Appendix A-1 Analyst Certification

The research analyst(s) primarily responsible for the preparation and content of this research report are named in bold text in the author block at the front of the product except for those sections where an analyst's name appears in bold alongside content which is attributable to that analyst. Each of these analyst(s) certify, with respect to the section(s) of the report for which they are responsible, that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc and its affiliates. No part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendation(s) or view(s) expressed by that research analyst in this report.

### IMPORTANT DISCLOSURES

Analysts' compensation is determined based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates ("the Firm"). Like all Firm employees, analysts receive compensation that is impacted by overall firm profitability which includes investment banking revenues.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 28th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at [https://www.citivelocity.com/cvr/epublic/citi\\_research\\_disclosures](https://www.citivelocity.com/cvr/epublic/citi_research_disclosures). Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Historical disclosures (for up to the past three years) will be provided upon request.

#### Citi Research Equity Ratings Distribution

<i>Data current as of 30 Jun 2015</i>	12 Month Rating			Relative Rating		
	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	46%	41%	13%	0%	100%	0%
<i>% of companies in each rating category that are investment banking clients</i>	65%	64%	60%	0%	64%	0%

#### Guide to Citi Research Fundamental Research Investment Ratings:

Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.

**Risk rating** takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.

**Investment Ratings:** Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation.

Prior to May 1, 2014 Citi Research may have also assigned a three-month relative call (or rating) to a stock to highlight expected out-performance (most preferred) or under-performance (least preferred) versus the geographic and industry sector over a 3 month period. The relative call may have highlighted a specific near-term catalyst or event impacting the company or the market that was anticipated to have a short-term price impact on the equity securities of the company. Absent any specific catalyst the analyst(s) may have indicated the most and least preferred stocks in the universe of stocks under consideration, explaining the basis for this short-term view. This three-month view may have been different from and did not affect a stock's fundamental equity rating, which reflected a longer-term total absolute return expectation. For purposes of NASD/NYSE ratings-distribution-disclosure rules, most preferred calls corresponded to a buy recommendation and least preferred calls corresponded to a sell recommendation. Any stock not assigned to a most preferred or least preferred call was considered non-relative-rated (NRR). For purposes of NASD/NYSE ratings-distribution-disclosure rules we corresponded NRR to Hold in our ratings distribution table for our 3-month relative rating system. However, we reiterate that we did not consider NRR to be a recommendation.

Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

#### NON-US RESEARCH ANALYST DISCLOSURES

Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the NYSE Rule 472 and NASD Rule 2711 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Ltd	Simon Weeden; Georgios Ierodiaconou; Nayab Amjad; Anna Oldinger; Stephen P Bechade, CFA
Citigroup Global Markets India Private Limited	Rohit Modi

## OTHER DISCLOSURES

---

This Product has been modified by the author following a discussion with one or more of the named issuers/issuers of the named securities.

---

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

---

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

---

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental research report, it is the intention of Citi Research to provide research coverage of the/those issuer(s) mentioned therein, including in response to news affecting this issuer, subject to applicable quiet periods and capacity constraints. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus.

---

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

---

**Important Disclosures for Bell Potter Customers:** Bell Potter is making this Product available to its clients pursuant to an agreement with Citigroup Global Markets Australia Pty Limited. Neither Citigroup Global Markets Australia Pty Limited nor any of its affiliates has made any determination as to the suitability of the information provided herein and clients should consult with their Bell Potter financial advisor before making any investment decision.

---

**The Citigroup legal entity that takes responsibility for the production of the Product is the legal entity which the first named author is employed by.** The Product is made available in **Australia** through Citigroup Global Markets Australia Pty Limited. Unless specified to the contrary, within EU Member States, the Product is made available by Citigroup Global Markets Limited, which is authorised by the PRA and regulated by the FCA and the PRA.

Pursuant to Comissão de Valores Mobiliários Rule 483, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Many European regulators require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at [https://www.citivelocity.com/cvr/eppublic/citi\\_research\\_disclosures](https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures).

Compensation of equity research analysts is determined by equity research management and Citigroup's senior management and is not linked to specific transactions or recommendations.

The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted.

Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product. Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via Citi's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated.

The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with Citi and legal and regulatory constraints. Citi Research product may source data from dataCentral. dataCentral is a Citi Research proprietary database, which includes Citi estimates, data from company reports and feeds from Thomson Reuters. The printed and printable version of the research report may not include all the information (e.g., certain financial summary information and comparable company data) that is linked to the online version available on Citi's proprietary electronic distribution platforms.
