

Response to: Proposal to apply Code powers to the Arqiva No. 3 Limited

Respondent: Name Withheld

Page 1: the 3 bullet points in 1. Overview

I find those 3 bullet points quite frankly frightening... In layman terms, it simply gives extraordinary powers to the applicant to install their product – linked to the 5G technology rollout – wherever they want: no need to obtain a street works licence to work on public highways; no need to obtain planning permission; if on private land, any objection from the owner will be overruled!

Really!? Am I living in England or in North Korea?
