

Mr J. Alston

Additional comments:

This proposal will clash with IR2030/1/23 a licence free part of the spectrum which is used for remote viewing of UAV cameras. This is used by thousands of people across the UK for commercial operations and for hobby events such as FPV racing. This proposal would wipe out our ability to operate.

We are seeing the beginnings of an emerging sport, one that brings together widely different groups of people into a close and supportive community. This proposal will infringe on this valuable community resource.

The Sport of FPV Racing is totally dependent on the video feed transmitted on these already crowded band. To open the band to uncontrolled wifi use will surely cause many issues and even cause hazards if these bands are tampered with.

I implore you to reconsider this proposal before you crush what could be the greatest and most inclusive sport the world has ever seen. The only sport where all levels of physical ability can compete side by side.

This Sport needs those radio bands and this proposal is its death nail.
