

Honeywell Security Group

Honeywell Security Group (HSG) is heavily involved in the supply of advanced radio-based security alarm systems throughout Europe and in particular the UK.

All of these systems currently use the dedicated 868-869MHz security frequency and our customers, such as ADT, have installed many thousands of these throughout the UK.

- HSG would like to stress the importance of technical conditions for LTE licensing allowing no impact on range for the SRD devices.
- Current studies show a loss of range on SRD due to terminal devices operating in 800 MHz band.
- It is critical to SRD, and not only social alarms but also alarms, fire alarms and general SRD that LTE devices located at 1 meter and above and operating at high power do not permanently reduce the range of these devices.
