

What do you want Ofcom to keep confidential?:

Keep name confidential

If you want part of your response kept confidential, which parts?:

Ofcom may publish a response summary:

Yes

I confirm that I have read the declaration:

Yes

Ofcom should only publish this response after the consultation has ended:

You may publish my response on receipt

Additional comments:

Question 1: Do you agree that copy management would broaden the range of HD content available on DTT and help secure its long term viability as a platform? :

I do not agree that copy protection would increase content. As an example look at copy free internet video sites. Excluding some users can never increase the audience.

Question 2: Do you agree that the BBC's proposed multiplex licence amendment represents the most appropriate means for securing an effective content management system on HD DTT? :

The BBC has succeeded as the public's broadcaster by being open with it's content. Locking down the content and limiting those who can view it would destroy it's role within the broadcasting industry.

Question 3: Do you agree with the proposed change to Condition 6 in the Multiplex B Licence? :

Restricting access to EPG information is a back door method of restricting access to content. Calling something 'Freeview' and then enforcing an agreement upon those who wish to use the EPG information is a misuse of the word free.

Question 4: Do you agree that Multiplexes C and D should be granted a similar amendment to their Licences as Multiplex B?. :

N/A

Question 5: Do you agree that the BBC's proposed approach for implementing content management would safeguard citizens and consumers legitimate use of HD content, and if not, what additional guarantees would be appropriate? :

I do not agree that the BBC's proposed approach would safeguard legitimate use of HD content; on the contrary, it will explicitly disallow legitimate use of HD content by citizens and consumers using open-source technologies such as MythTV, citizens who wish to make their technology choices based on price without having to pay the inevitable price increase levied by firms who have struck a secret agreement and then passed the resultant cost onto the consumer, and frankly any British resident who enjoys consuming BBC content and does not want to have their existing working equipment rendered obsolete without having done anything wrong.

Question 6: Do you agree that the BBC's proposed choice of content management technologies will have only a negligible impact on the cost of HD DTT receivers and their interoperability with other HD consumer equipment? . :

I do not agree that the content management technology choices proposed by the BBC will have a negligible impact on cost and interoperability. Requiring consumers to buy new equipment is a cost in itself, especially when that new equipment is deliberately incompatible with existing equipment, such as HD TVs, which currently work but did not anticipate an industry-led imposition of a Broadcast Flag.

Question 7: Do stakeholders agree that the BBC's proposed Huffman Code licensing arrangements would have a negligible effect on the market for HD DTT receivers? :

Question 8: Do the BBC's proposed content management states and their permitted use for different categories of HD content meet the requirements of other HD broadcasters on DTT? . :

Question 9: Are there any issues that you consider Ofcom should take into account in assessing the BBC's proposal, that have not been addressed by this consultation?:

There is a growing market in open source based video access equipment that will be negatively impacted by these changes (eg Boxee). Open source users have already been affected by changes to the BBC iPlayer system and will again be hit by these proposals. Open source software is a major part of the UK IT industry and the impact of these changes on this industry should not be ignored.
