Report Summary

As the radio spectrum is continually changing, these measurements can only provide information on the radio frequency (RF) conditions for the specific locations at the time of the survey.

The Office of Communications (Ofcom) performed this survey of the RF emission environment in the vicinity of Windsor House, Kings Heath, Birmingham on the 5th October 2005. Both second generation (2G) and third generation (3G) base station emissions were measured separately and the signal levels combined to give the Total Band Exposure as detailed below.

The table, sorted in descending order of signal level, summarises the total results obtained at each measurement location.

Summary of results:

Location	3G Exposure Quotient	2G Exposure Quotient	TOTAL 3G + 2G Exp. Quot.	Related to ICNIRP limit
Car Park at rear of Clearlight Mount Pleasant	2.85E-05 1.17E-05	1.80E-04 1.94E-04	2.09E-04 2.06E-04	1/4796 1/4861
Junction of Station Rd and High St	2.33E-05	1.70E-04	1.93E-04	1/5173
Findley Rd Retail Park by Topps Tiles	2.09E-05	6.48E-05	8.57E-05	1/11669
Footpath outside Windsor House	1.03E-05	2.31E-05	3.34E-05	1/29940
Kings Heath Primary School staff car park	2.17E-06	9.57E-06	1.17E-05	1/85179

The Peterborough office carried out the 2G audit, while mobile team 2 from Baldock completed a concurrent 3G survey. The results from both have been combined to provide the summary of results on page 3.

Initially the base station was scanned to ascertain the extent of 3G activity.

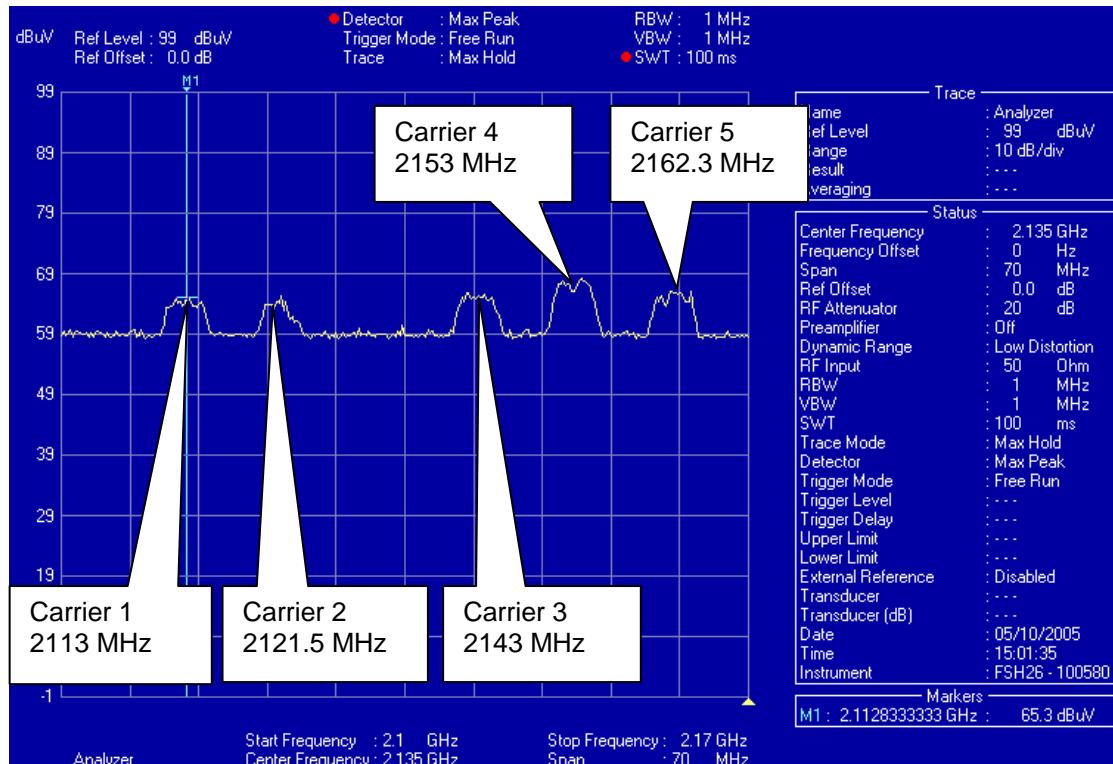

Figure 1

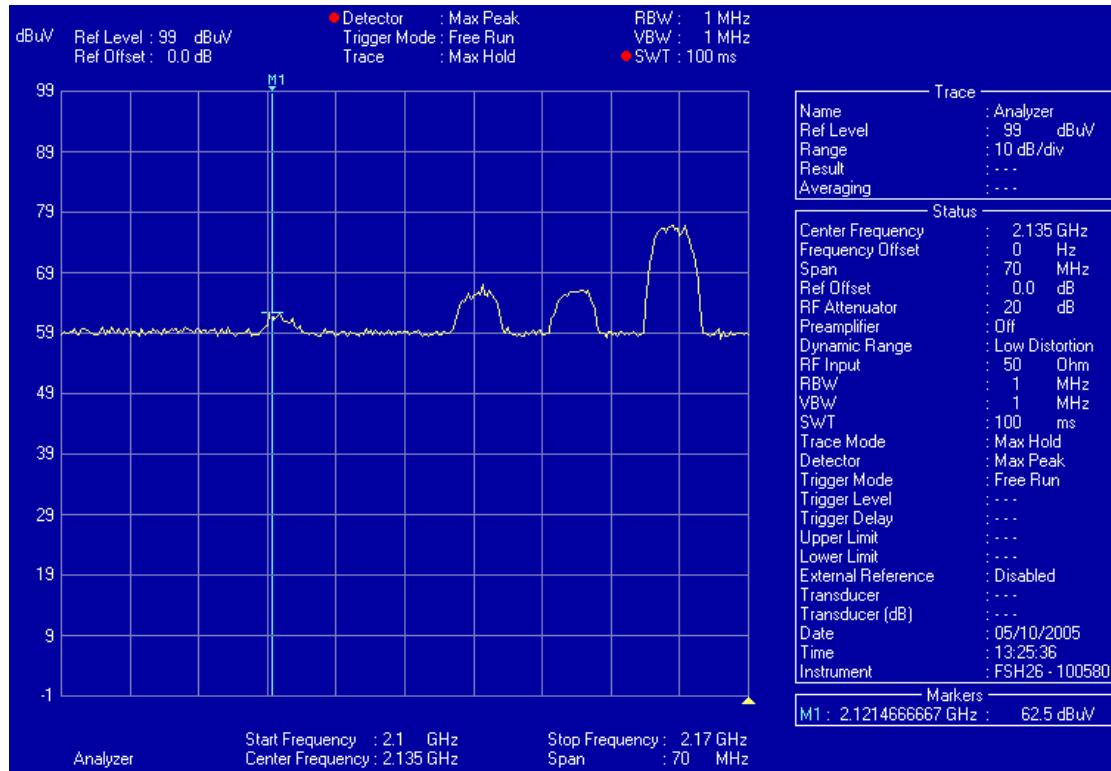

Figure 1 shows that a maximum of five transmissions where active in this area. At each measurement location the measuring antenna was then set up on a tripod 1.5m above ground level. In this position each of the carriers field strengths were recorded.

For each measurement location the 3G exposure quotient was then calculated for the individual carriers and then the total exposure quotient for all five carriers was calculated. This in turn was added to the 2G exposure quotient before calculating the Total Exposure Quotient for each survey site.

All the 3G measurement data is given on pages 5 to 10, while the 2G data is contained in the annex to this report.

2G Mobile Phone Base-Station Audit

Mobile Phone Base-Station Audit

Audit site: Area around Windsor House
High Street
Kings Heath
Birmingham
B14 7BB

In 2000 the Government asked the Radiocommunications Agency to implement a national measurement programme to ensure that emissions from cellular base stations do not exceed the guidelines for public maximum exposure set by the International Commission on Non-Ionizing Radiation Protection (ICNIRP). Ofcom took over the functions of the Radiocommunications Agency, along with those of the Independent Television Commission, Radio Authority, Oftel and Broadcasting Standards Commission, on 29 December 2003.

Electric field strength measurements made in various bands are referenced to and presented alongside the relevant ICNIRP public maximum exposure levels. On the left hand side of the results page(s) is a graphical representation of the radio spectrum surveyed at each location on the site. The green line on each graph indicates the ICNIRP guideline exposure level for that frequency band. To the right hand side of each graph is a table showing the ten highest level emissions recorded within a band.

Further explanation of the results and their context within the ICNIRP guidelines can be provided by the Ofcom officers at the time of the audit or by contacting Ofcom on 0845 456 3000, or by email at contact@Ofcom.org.uk. Results taken from all audit sites and further information on the audit programme can be found on the Ofcom website at www.ofcom.org.uk.

Report Summary

As the radio spectrum is continually changing, these measurements can only provide information on the radio frequency (RF) conditions for the specific locations at the time of the survey.

Ofcom performed this survey of the RF emission environment prevailing in the vicinity of Area around Windsor House on 5 October 2005.

The following table, sorted in descending order of signal level, summarises the results obtained at each measurement location.

Summary of results:		
Location	Total Band Exposure	Relationship to ICNIRP Limit
Mount Pleasant	1.94E-04	1/5162
Car Park at rear of Clearlight	1.80E-04	1/5548
Junction of Station Road and High Street	1.70E-04	1/5879
Findley Road Retail Park by Topps Tiles	6.48E-05	1/15430
Footpath outside Windsor House	2.31E-05	1/43312
Kings Heath Primary School staff car park	9.57E-06	1/104462

Glossary

Site:	The building or area around which sets of measurements are taken
Location:	The position within a site at which a single set of measurements is taken. A set of measurements consists of multiple scans of many frequencies within a number of bands
Band:	A portion of the electromagnetic spectrum reserved for specific radio services
NGR:	The Ordnance Survey national grid reference coordinates of the location. In this survey NGRs are specified to 8-digit (10-metre) resolution. E.g. SJ 9755 9888
GPS:	The Global Positioning System
Start Time:	The date and time at which the receiver started taking its measurements at a location
Officer:	The name of the RA representative who carried out the audit
Receiver:	The receiver used to perform the measurements
Antenna:	The antenna used to perform the measurements
Exposure:	The maximum measured electric field strength ($\text{dB}(\mu\text{V}/\text{m})$) converted to an equivalent power density (W/m^2)
Power Density:	The electromagnetic energy flowing through a unit area normal to the direction of propagation in a unit time. Measured in Watts per square metre (W/m^2)
ICNIRP Limit:	The reference level given by the International Commission for Non-Ionizing Radiation Protection (ICNIRP) for general public exposure to electromagnetic fields

Frequency	ICNIRP limit
10MHz to 400 MHz	2 W/m^2
400MHz to 2GHz	f / 200 W/m^2
2GHz to 300GHz	10 W/m^2

(where f is frequency in MHz)

Frequency Exposure Quotient:

The ratio of the measured maximum power density to the ICNIRP limit at a given frequency. A value close to 1 signifies that exposure levels could be near to the ICNIRP limit for that frequency

Band Exposure Quotient:

The sum of the frequency exposure quotients for a single band at a location

Total Band Exposure Quotient:

The sum of the frequency exposure quotients for all of the measured bands at a location

GSM:	Global System for Mobile communication
ETACS:	Extended Total Access Communications
TETRA:	Terrestrial Trunked Radio
3G:	Third Generation mobile-phone services

1.00E-03:	Exponential (or 'scientific') number format. Equal to one thousandth
1.00E-06:	Equal to one millionth
1.00E-09:	Equal to one thousand-millionth
1.00E-12:	Equal to one million-millionth
