

Your response

Question	Your response
<p>Question 1: Do you anticipate one or more of the NGSO gateways in these applications will pose coexistence challenges to existing services?</p> <p>Please provide evidence of the impact of any likely interference in terms of throughput and unavailability.</p>	<p><i>Is this response confidential? – No.</i></p> <p><i>No, I don't anticipate any coexistence challenges.</i></p>
<p>Question 2: Do you consider that the measures to enable coexistence with future systems, as set out by the applicant, are reasonable? If not, what are your concerns and to which specific gateway sites do your concerns relate?</p>	<p><i>Is this response confidential? – No.</i></p>
<p>Question 3: Could the granting of one or more of these licences prevent your service from operating in the UK or make it less attractive or more costly to enter the market? If yes:</p> <ul style="list-style-type: none"> ● Please outline your proposed services, including gateway locations, and indicate when you are planning to start deploying your services. ● Please also explain the reasons why granting these licence applications would affect or restrict (i.e. make more costly or less attractive) your future service in the UK. ● Please state which of the proposed gateway applications would affect your deployment (if relevant). 	<p><i>Is this response confidential? – No</i></p>
<p>Question 4: Do you have any additional concerns or comments regarding this application?</p>	<p><i>Is this response confidential? – No,</i></p> <p><i>I have been using starlink as my only primary ISP now since Summer 2021. Due to lack of last-mile infrastructure the best fixed line speeds I can get are sub 10/5Mbit and many others in the Uk are in same or worse situation. Starlink has enabled me to Level up to what is expected of a internet connection today (200-300Mbps). In order for SpaceX / Starlink to continue to serve more customers that can't be served by fixed line. Granting these Ground gateway stations is important. To be able to grow the service. I fear that not granting these gateway licences will limit the adoption and growth of</i></p>

this wonderful tech and will impact the public who are waiting for starlink service in remote UK locations that may not have spare capacity to provide service.

Starlink service in the year + I have had it has been faultless and highly recommend to others who are unserved by fixed-line or mobile internet.
