

Title:

Mr

Forename:

Chris

Surname:

Randall

Representing:

Self

Organisation (if applicable):

What additional details do you want to keep confidential?:

No

If you want part of your response kept confidential, which parts?:

None

Ofcom may publish a response summary:

Yes

I confirm that I have read the declaration:

Yes

Additional comments:

The gradual chipping away of our freedom to use the electromagnetic spectrum is of great concern to many UK and foreign users and experimenters of and in these natural resources. It is especially galling to see that the theft of these areas from general use is for purely financial reasons and for the profit of large companies and just another way for the Government to extort money from the British Public in the most dishonest way. Its is just robbery, pure and simple. I suggest that you pay every single member of the Public back for these thefts. You obviously have a figure in mind!

Question 1: Do you agree that it is likely that the benefits to UK consumers and citizens will be greater from the MoD's release of spectrum in the 2.3 GHz and 3.4 GHz release bands than from retaining the current amateur use?:

Certainly not

Question 2: Are there current uses in the release bands other than those detailed in RSGB's band plan and discussed in Section 3 of this consultation?:

How can I know this?

Question 3: Are there further consequences of removing the release bands from amateur licences that have not been considered in our analysis?:

Yes. These thefts undermine public confidence in Government and help promote more civil unrest

Question 4: There is an option (although not preferred) to remove access to the adjacent bands, as well as to the release bands. What are the consequences of removing access to the adjacent bands from amateur licences?:

Don't know

Question 5: Are there current uses in the adjacent bands other than those detailed in the RSGB's band plan and discussed in Section 3?:

Question 6: Are there additional mitigation measures which would provide demonstrable proof that amateurs would not cause interference into LTE in the release bands following the release?:

The people who experiment in these bands are dedicated to proper operation and only tend to use low power anyway. Therefore interference will be minimal

Question 7: Do you agree with the proposed process for varying licences following cases of reported interference and our proposal to vary licences should dealing with the number of reported cases become too onerous?:

These sentences are written in poor English. I can only deduce that they are intended to confuse. If I read this correctly my answer is in the negative

Question 8: Do you agree with our preferred option?:

There you go again!

Question 9: Are there additional changes to the Amateur Radio Licence which would assist amateur in lowering the risk of causing harmful interference to new uses?:

The new users are just after profit and have no regard for amateur experimenters. They are trying to grab a natural resource for pure profit in most cases. Once again Amteur Radio

Operators are being put in the same category as The Old, The Sick and The Poor and being robbed of a natural resource.
