

Dr Rajan Chadha

**Additional comments:**

Thank you for giving the opportunity to respond to the consultative document regarding the use of devices in the white space UHF TV band under a licence-exemption regime.

I support the policy proposal to allow white space devices and infrastructures access to unused frequencies in the UHF TV Band under a licence exemption regime, provided that the devices meet certain minimum technical and built in interference mitigation schemes. There are numerous examples whereby sharing, licence-exempt regimes have led to a tremendous amount of innovation, and is vital for social economic benefits.

**Question 1: Do you have any comments on the drafting of the Proposed Regulations?:**

It is well drafted. However, I also believe that the regulation should be independent of technology or architecture.
