# APPENDIX PAVING THE WAY FOR MORE INCLUSIVE RESEARCH

Better practice research with disabled people and people with long-term conditions

# **METHODOLOGY**

A report for Ofcom and Communications Consumer Panel by Magenta.

## **METHODOLOGY**

### **APPROACH**

### **OVERVIEW**

The methodology comprised of three stages: a literature review, including discourse analysis on selected papers; 40 x 45-minute stakeholder interviews; and a 2.5-hour stakeholder workshop with 21 stakeholders.

### LITERATURE REVIEW

### Aim

The aim of the literature review was to explore the existing methodologies, languages and questions used in existing published research by a range of organisations. The review addressed the following:

- the extent to which the medical and social models of disability were considered throughout the research process.
- any barriers or challenges to involving disabled people in research, and what the solutions to these were.

### **Approach**

A review of 42 published reports from 2017 to January 2024. The reports were published by a range of organisations. The literature review was conducted in three stages:

- 1. Creating a search protocol: This allowed for a methodical search to be completed, and clear records to be kept of how literature has been found.
- 2. Searching and prioritising: This involved searching for the literature based on the search protocol. We prioritised reports published more recently, as language, terminology and practices in this area are always changing and as such, more recent reports are likely to be most relevant.
- 3. Reviewing the literature: Each document was read, and a proforma completed, which identified how disabled people were included at all stages of research, the language and terminology used, any barriers and challenges and whether there were actionable recommendations. We considered the ways in which the research drew upon the social or medical model of disability and identified any gaps or contradictions in the literature, as well as considering the differences between different groups, such as people with physical disability or neurodiversity.

### Breakdown of papers

The following papers were included in the literature review. Papers included within the literature review can be found at the end of this document.

Organisation Type	No. of reports
Organisation Type	

Government/Public Body	16
Regulator	6
Charity	11
Market Research	2
Academic publications	2
Other	5
Total	42

### Discourse analysis

Discourse analysis was conducted on six papers. This focuses on the specific words and phrases used to uncover any implicit meanings in language used. We used discourse analysis to explore how the social and medical models of disability may be implicitly drawn upon in reports. This offered an additional understanding of how the specific language used makes relevant either the social or medical models of disability even when they are not explicitly discussed.

### STAKEHOLDER INTERVIEWS

### Aim

To capture stakeholders' experiences and perspectives and hear the latest thinking and best practice on the topic. This was an opportunity to hear experts' perspectives on findings from the literature review and test emerging hypotheses.

### **Approach**

40 x 45 minute online in-depth interviews with stakeholders across the following sectors:

Organisation Type	No. of stakeholders
Charity	13
D&I Expert	7
Research Expert	10
Regulator	2
Government/Public/Consumer	
Body	6
Recruitment	2
Total	40

Some stakeholders specialised in disability and research, whereas others specialised in either research or disability. Some specialised in a certain disability, others did not. A breakdown by disability type is below:

Condition Type	No. of stakeholders
Pan	25
Visual	2
Hearing	4
Physical (inc. mobility)	2

Learning (inc. difficulties & memory)	6
Mental health	4
Social/behavioural (inc.	
neurodivergence)	2

A full sample breakdown of stakeholders involved in the research can be found below in 'Sample breakdown'.

Interviews were conducted between 15th January and 8th March 2024. The discussion flow was modified for each stakeholder, depending on their area of expertise and professional experience. Topics included:

- Understanding stakeholders' professional experience and expertise.
- Exploring language around disability and how to define target groups for research purposes.
- Understanding the different approaches to recruitment and engagement, accommodations made and their impact on research outcomes.
- Understanding best practice when analysing and reporting.
- The role of expert and advisory groups and participatory research and their impact.

### STAKEHOLDER WORKSHOP

### Aim

To bring together a group of stakeholders from those we interviewed, from across the different groups to discuss the findings, align on the approach that bests fit with Ofcom needs, and create actionable next steps.

### Approach

A 2.5-hour hybrid workshop, with 21 stakeholders. 11 joined online, and 10 joined in-person at Ofcom's London office. The workshop was held on 13th March 2024. The workshop topics were based key themes coming out of the stakeholder interviews, and deep-dived on any areas of conflict between stakeholders. Stakeholders were set various exercises around the following topics:

- Question wording to defining disability.
- Response options for questions asked about disability.
- Sample make-up.
- Approach for testing the guidelines produced.

### Sample breakdown of stakeholders

Below is a breakdown of the organisations the stakeholders represented.
