

Darryl Keen
Chief Fire Officers Association

Do you have any comments on the proposed statutory instrument set out in this notice?

Fire and Rescue Services make considerable use of Gateways for the transfer of emergency services information to support effective emergency response. We welcome the recognition that multiple users being able to use a single gateway within a single business entity may continue - this supports an important aspect of emergency service mobile communications and, if it had been removed, would have placed a considerable additional burden on many emergency services.
