

Title:

Mr

Forename:

Aron

Surname:

Hobson

Representing:

Self

Organisation (if applicable):

Email:

m3zzncolchester@gmail.com

What additional details do you want to keep confidential?:

No

If you want part of your response kept confidential, which parts?:

Ofcom may publish a response summary:

Yes

I confirm that I have read the declaration:

Yes

Additional comments:

Question 1: Do you agree with Aegis's conclusions on congestion of current use of 420-470 MHz spectrum? Are there any other signs or areas of congestion that Aegis have not identified from their review?:

no i don't agree with it as its a good quality band that needs use and its not congested because it needs more users

Question 2: Do you agree with Aegis's conclusions on the future demand and use of 420-470 MHz spectrum over the next ten years? Are there any other future uses or areas for future demand that Aegis have not identified from their review?:

uhf cb should get used in 934mhz

Question 3: Do you agree with Aegis's conclusions that there is not yet any UK demand for wideband services in the 450-470 MHz band (which could for example, be used to improve rural mobile coverage)? Please provide any supporting evidence for your position.:

yes it could be used more as its the ex police band and only a few users in the 450 to 470 range there is plenty of room for more users

Question 4: Have you experienced degradation in your systems? performance which you consider to be caused by continental interference in the last 12 months? If yes, what approach did you take towards managing and minimising interference?

Please provide any supporting evidence which explains the frequency, impact, duration, time, location and cause (whether suspected or investigated) of the interference with respect to your specific sector(s).:

no

Question 5: Is there additional information relevant to the configuration of the 420-470 MHz band that we should consider in developing our approach to its future management? Please provide any evidence to support your views.:

Question 6: Do you agree with the potential solutions Aegis have proposed for managing the 420-470 MHz band to both meet the continued growth in congestion and demand from incumbent spectrum users, and to facilitate the deployment of wideband technologies? Are there any other solutions which you consider we should examine that Aegis have not

identified from their review?

Please provide any evidence to support your position and reference each solution in your response as appropriate.:

no i dont agree

Question 7: Do you have any further comments relevant to how we might manage spectrum between 420-470 MHz? :

yes it needs to be kept if amateur radio has a future then the 70cms band is important part of the band especially for new license holders 446 is another good band but could be expanded as there is a lot of users on the band and does get congested only having 8 channels is not enough

Question 8: Do you have any comments on our proposed programme of work, the outcomes from which we will use to inform future decisions on how we manage the 420-470 MHz band? Are there any additional areas you consider we should explore?:

the band does not need anything done to it in the 70cms band or 446
