Question 1: Do you agree with the proposal to vary the 1800 MHz Public Wireless Network licences to increase the maximum permissible downlink transmit power (e.i.r.p.) by 3 dB from 62 dBm per carrier to 65 dBm per carrier for UMTS and from 62 dBm per 5 MHz to 65 dBm per 5 MHz for LTE and WiMAX technologies?:

Yes - and higher if you can!

Additional comments:

Not from the Telecommunication Sector but still having two pence worth. If this ultimately would mean that coverage is better or stronger then currently is - I am all for it!!
