Question	Your response
Question 1: Do you have any comments on Ofcom's proposed Work Plan for 2026/27?	<p>Confidential? – N</p> <p>Lacuna Space has recently responded to the consultation on the Wireless Telegraphy Regulations 2025. In this consultation, we highlighted the benefits of extending the existing use of the SRD bands by adding a satellite component, which recently has been named LPD-S (Low Power devices communicating with satellites) in CEPT groups. ECC Decision (25)02 has been adopted on CEPT level, and its national implementation would be of great value for Lacuna Space. We think that this matter could be reviewed under “Meeting the Growing Demand of Spectrum for Space” in Ofcom’s proposed plan of work.</p> <p>Lacuna Space was the first company to commercially verify satellite-IoT systems in the 862-870 MHz band, and we want to use this opportunity to kindly request regulatory support in our home country, e.g. by implementing ECC Decision (25)02 in the UK or by identifying similar solutions.</p>
