

Title:

Mr

Forename:

David

Surname:

Ruck

Representing:

Self

Organisation (if applicable):

Email:

What additional details do you want to keep confidential?:

Keep organisation confidential

If you want part of your response kept confidential, which parts?:

Ofcom may publish a response summary:

No

I confirm that I have read the declaration:

Yes

Additional comments:

Question 12: Do you agree that the UK should continue to support harmonisation of 694 - 790 MHz for mobile broadband and an out-of-band emission limit for protection of DTT reception in an ITU R Recommendation, alongside an acknowledgement that 694 MHz should be the lower frequency boundary for the band?:

No, the TV broadcast frequency band should be preserved to allow the introduction of more HDTV channels and eventually UHDTV.

Reducing the frequency range further will only serve to drive viewers to more expensive monopolist satellite and cable suppliers.

Question 15: Do you agree that if any allocations to the fixed satellite service in the 10-17 GHz range impose undue constraints on existing services then further studies on the demand and justification for use of the spectrum would need to be carried out?:

Satellite bands should only be used for satellite services and not re-purposed for terrestrial use.

Question 16: Do you agree that the UK should support retaining the recognition for aeronautical radionavigation use, but equally support reviewing the limits associated with the FSS with a view to facilitating better use by the FSS?:

Aeronautical voice and navigation spectrum which is critical for safety should not be chargeable to aircraft operators OR airfields.

Question 24: Where the appropriate radio regulatory provisions are established for use in existing aviation related bands, do you agree that the UK should support regulatory conditions for the accommodation of WAIC applications?:

Aeronautical voice and navigation spectrum which is critical for safety should not be chargeable to aircraft operators OR airfields.

Question 27: Do you agree that it is right to wait for the relevant sharing studies to mature before coming to a final position on the potential for additional allocations to the earth exploration-satellite (active) service in the 8/9/10 GHz band?:

Satellite bands should only be used for satellite services and not re-purposed for terrestrial use.

Question 29: Do you agree that the UK should support maintaining UTC as currently defined (i.e. with the inclusion of leap seconds) and that the UK should support further study around the concept of dissemination of two reference time scales?:

UTC with leap seconds should be maintained, and additional reference scale should be rejected.
