

Question 1: Do you agree with our proposal to allow high power PMSE use in channel 38 on 606.7 and 607 MHz at a maximum of 10 W ERP?:

I do broadly agree with the use of high power PMSE use within Channel 38 although it is a pity no other spectrum availability could be found to accommodate these links, namely around 460 MHz. If this is the best we are to end up with then I'm in agreement that Ofcom should proceed, it will then be up to manufacturers to be able to procure something suitable at these frequencies as currently there are no manufacturers producing anything commercially available.
