

Mr B Hollis

Dear Sir

For the new generation of mobile phone usage. Some constructive comments.

I am sure it will entail more masts.. I have no real objection to them.

May I strongly suggest that somehow , a scheme is put forward, to encourage all of the different users to use the same masts ( only where possible )

In other words, there is a right to space on a mast for another user to put their equipment , providing a proper or correct fee is paid .

Once they get over the shock , the companies may find it is to their benefit.

BBB) for every mast they put into a dense area, they should put a mast in a remote area..

Definition of dense and remote to include strong and weak signal areas . We get a signal if the wind is in the right direction, and we are in a flat area and hardly remote. Hopeless !

2) Finally, a long shot, My bet is the electricity pylons could be used as super masts.. as the electricity is on a different wave length to phone signals.. Maybe worth someone taking a look and doing a deal ?
