**What do you want Ofcom to keep confidential?**

Keep nothing confidential

**Question 1: Are there any reasonable grounds why Ofcom should not grant the request to vary the five Wireless Telegraphy Third Generation Mobile Licences by increasing the permitted maximum in-band EIRP to 68dBm as soon as practicable? If so, please explain your reasoning for this.:**

At a time when many countries are considering the potential risks of radiofrequency non ionising radiation, and as the body of literature documenting the biological effects of such is steadily increasing, it would be wholly irresponsible of Ofcom to allow such a jump in permissible levels.

My partner, once a PA to one of the top executives in the country, now lives in a motorhome, having to keep away from such radiation, as it makes her very ill. There are a steadily growing number of people reporting ill effects from exposure to modulated radiowave technology, I am slowly, worryingly getting in touch with more day by day.

Before granting a licence for this huge increase in radiation, please take a step back. This will mean the growing number of people falling ill from rf radiation will increase, and unfortunately, if you allow this, it will be on your heads. You will condemn many to an increasingly tortuous existence.

The precautionary principle has never been more important.

**Question 2: Are there any reasonable grounds why Ofcom should not also apply the increased permitted maximum in-band EIRP to future 2 GHz MSS/CGC licences? If so, please explain your reasoning for this.:**

As above.
