What do you want Ofcom to keep confidential?

Keep name confidential

Question 1: Are there any reasonable grounds why Ofcom should not grant the request to vary the five Wireless Telegraphy Third Generation Mobile Licences by increasing the permitted maximum in-band EIRP to 68dBm as soon as practicable? If so, please explain your reasoning for this:

On health grounds. People who suffer from Electro sensitivity are suffering from the sea of microwaves in our towns. ES is recognized by the WHO and the telecoms industry cannot guarantee that their products are without health risks. Smoking has been banned in public places so that people can choose to risk their health. WHY should the telecoms ind and government make the choice to risk our health and severely debilitate those suffering from Electro sensitivity. In Sweden the government provide screening materials free, the health issues are real, I feel very strongly that OFCOM should put a stop to this and follow other countries footsteps in reducing the level of microwave radiation in our towns rather than increasing it.

Question 2: Are there any reasonable grounds why Ofcom should not also apply the increased permitted maximum in-band EIRP to future 2 GHz MSS/CGC licences? If so, please explain your reasoning for this:

All of the above health reasons.....my 4 year old daughter suffers from Electro sensitivity we have had to move to a school that doesn't have a mast next door to it and one that doesn't have wi fi in side it. We have spent a large amount of money shielding our house from the emissions from the nearby mast which intruded in our home and her bedroom.....please do not let this continue.
