**What do you want Ofcom to keep confidential?**

Keep name confidential

**Question 1: Are there any reasonable grounds why Ofcom should not grant the request to vary the five Wireless Telegraphy Third Generation Mobile Licences by increasing the permitted maximum in-band EIRP to 68dBm as soon as practicable? If so, please explain your reasoning for this:**

Yes. There are very reasonable grounds why Ofcom should not permit an increase in power output for 3G masts.

There are no assurances that the current power output levels of mobile masts are safe for the people that live in close proximity. The current output of mobile masts is proven to be having a negative health impact on a number of people in this country and to involuntarily expose people to these proposed increased the levels will cause more people to suffer unnecessarily.

**Question 2: Are there any reasonable grounds why Ofcom should not also apply the increased permitted maximum in-band EIRP to future 2 GHz MSS/CGC licences? If so, please explain your reasoning for this:**

For the same reason as posted above.
