What do you want Ofcom to keep confidential?

Keep name confidential

Question 1: Are there any reasonable grounds why Ofcom should not grant the request to vary the five Wireless Telegraphy Third Generation Mobile Licences by increasing the permitted maximum in-band EIRP to 68dBm as soon as practicable? If so, please explain your reasoning for this:

The most reasonable ground is people's health.

The effects of this technology are currently unknown and as such, OFCOM would be taking a major risk with other people's health to allow this.

I do not believe OFCOM have the remit to gamble with people's health.

It is obvious to all who observe mobile telecoms that the reason for doing this is the cost to mobile operators. This places a big question mark over any organisation which allows gambling with the public's health for financial reasons.

If OFCOM were to start looking into cancer clusters near higher powered transmitters or even the number of complaints of ill-health being raised by users of Airways, it may consider it's position.

Question 2: Are there any reasonable grounds why Ofcom should not also apply the increased permitted maximum in-band EIRP to future 2 GHz MSS/CGC licences? If so, please explain your reasoning for this:
