

**What do you want Ofcom to keep confidential?:**

Keep name confidential

**If you want part of your response kept confidential, which parts?:**

**Ofcom may publish a response summary:**

Yes

**I confirm that I have read the declaration:**

Yes

**Ofcom should only publish this response after the consultation has ended:**

You may publish my response on receipt

**Additional comments:**

**Question 1: Do you agree that copy management would broaden the range of HD content available on DTT and help secure its long term viability as a platform? :**

No. 110% not in a month of Sundays!

Anyone with a clue will work their way around it anyway. Take a look at the HDTV already available on the internet to see this is futile and pointless. Please embrace open and free video standards too.

**Question 2: Do you agree that the BBC's proposed multiplex licence amendment represents the most appropriate means for securing an effective content management system on HD DTT? :**

No, they are trivially bypassed, they will actually aid piracy because the wish to de-DRM the content will be higher because it was foolish to DRM it in the first place.

**Question 3: Do you agree with the proposed change to Condition 6 in the Multiplex B Licence? :**

No.

**Question 4: Do you agree that Multiplexes C and D should be granted a similar amendment to their Licences as Multiplex B?. :**

No.

**Question 5: Do you agree that the BBC's proposed approach for implementing content management would safeguard citizens and consumers legitimate use of HD content, and if not, what additional guarantees would be appropriate? :**

You're kidding right? The proposed approach smells like DRM providers have been at the document for goodness sake. They are the only ones that will make money out of this action.

**Question 6: Do you agree that the BBC's proposed choice of content management technologies will have only a negligible impact on the cost of HD DTT receivers and their interoperability with other HD consumer equipment? . :**

No. Less people will buy the hardware because of thus the hardware will be more expensive. Stop thinking like Intel and start thinking like Dell.... A box in every home is more popular than buy our chips they are the only ones with a license to work with this content.

Open standards beg for competition in the hardware marketplace. £20/box in Asda should be the goal to provide wide consumer access!

**Question 7: Do stakeholders agree that the BBC's proposed Huffman Code licensing arrangements would have a negligible effect on the market for HD DTT receivers? :**

that would depend on exactly whats being licensed.

**Question 8: Do the BBC's proposed content management states and their permitted use for different categories of HD content meet the requirements of other HD broadcasters on DTT? . :**

Very unlikely.

**Question 9: Are there any issues that you consider Ofcom should take into account in assessing the BBC's proposal, that have not been addressed by this consultation?:**

Open access to the average colour license subscriber.

We want IP TV in HD, or Hd on very cheap hardware, we want universal open access to quality content that we the license payer pay for.

Just say no to DRM or the illegitimate content delivery channels will pwn your ass and publish it DRM free for you and the license payer will resent you for not making access free and easy.

Get it? Got it ? Good!
