

Question 1: Which of the three options do consultees favour, and why?:

Option 2 all channels.

So people in my position can see and hear programme. Enlightenment of the programme getting a better understanding of the programme.

Once you've watched a programme with audio description you don't want to see it again without. Even sighted people who've watched it with me said they noticed things they wouldn't have done.

I use Sky and have children of varying ages so I watch a lot of different programmes. When there isn't AD I have to ask the family. But with I can enjoy the programme with them.

Please have audio description on stargate universe - it's on Sky One.

I chose what I watch according to what has AD. So by increasing amount of AD will increase the amounts of programmes I can watch and viewing pleasure.

Question 2: Do consultees have any further suggestions for future access service provision? If so please provide the rationale for these suggestions:

Can you stop people doing subtitles for information that they're not reading out.
