

Question 1: Which of the three options do consultees favour, and why?:

Option 2 because it would make a lot more channels available to me. There are a lot of things that I try to watch at the moment that are not audio described and therefore I am unable to watch them.

Question 2: Do consultees have any further suggestions for future access service provision? If so please provide the rationale for these suggestions:

I find some of the words that they use in the audio description are not necessarily accurate. I have a sighted friend who is sometimes with me while watching TV who tells me that they're not always saying what is actually going on.

Comments:

Something that would be nice is to have news items audio described.
