

Question 1: Which of the three options do consultees favour, and why?:

Option Two. I am blind and find audio description invaluable, I barely watch TV programs that do not have audio description as it is very difficult to follow what is happening on screen. Audio description has revolutionised my enjoyment of television.

Question 2: Do consultees have any further suggestions for future access service provision? If so please provide the rationale for these suggestions:

Please increase the level of audio description as much as possible, this way more blind and partially sighted people would be encouraged to watch TV as following programs would be easier.
