

Question 1: Which of the three options do consultees favour, and why?:

Option two - allow watching of the broadcast services to be more inclusive. My wife is tired of describing things to you. An increase in 20% this would mean I could watch television on my own alot more rather than wait for sighted assistance.

Question 2: Do consultees have any further suggestions for future access service provision? If so please provide the rationale for these suggestions:

It would be a good idea that if the channels were spoken - i.e if I switched channels it would say what the channel number was and details of start and end time.
