

Question 1: Which of the three options do consultees favour, and why?:

Option 2 because I am totally blind and I like to watch television. It makes a tremendous difference, especially on certain programmes (such as Doc Martin).

Question 2: Do consultees have any further suggestions for future access service provision? If so please provide the rationale for these suggestions:

Generally I find it pretty good. The only problem I sometimes have is with high definition programming, you don't get audio description.

On Ceefax you have to be on the London channels to get audio description and not on the regional channels. I have to change to London channels to be able to get the audio description.
