

Question 1: Which of the three options do consultees favour, and why?:

option 2. Visually impaired individuals should have as much access as possible to television programs available to their sighted peers and this is now possible with audio description.

Question 2: Do consultees have any further suggestions for future access service provision? If so please provide the rationale for these suggestions:

In the future the amount of audio description available should be increased. I believe that in a world where equal opportunities is such a vital goal, failure to audio describe programs is in fact denying visually impaired individuals to fully enjoy programs available to sighted individuals.
