

Question 1: Which of the three options do consultees favour, and why?:

Option 3

I'd rather it was done properly on a fewer number of channels than not properly on all. And then increase it to all channels later.

A good commentary makes a world of difference. I wouldn't bother if it wasn't for the description. My sight is getting worse and I think I'll use more audio description in the future, If you can't see audio description is the next best thing.

Question 2: Do consultees have any further suggestions for future access service provision? If so please provide the rationale for these suggestions:

Audio description difficult because I have hearing problems too. Need to try and stop people playing music etc during voice overs.
