

**Question 1: Which of the three options do consultees favour, and why?:**

I am responding to ask why the level of audio described programs is not higher than currently available.

**Question 2: Do consultees have any further suggestions for future access service provision? If so please provide the rationale for these suggestions:**

I would like to see all programs offered with audio description and signing as a matter of course. Is it not breaking the law under the disability discrimination act to restrict this service. Most of the programs i wish to view are not on until the early hours or afternoon meaning i can only record a limited number which also incurs an additional cost over the year as i must then replay the program, rather than being able to see the program in real time as do the majority of the population.

**Comments:**

The more this becomes available as the norm the cheaper it becomes for the program providers
