

Question 1: Which of the three options do consultees favour, and why?:

Option 2 - because any programme you sit down to watch is so much better with audio description and you don't know ahead of time which one you'll watch. It's so exciting, such a nice surprise, when visiting someone to watch a programme on a higher channel and to find audio description.

Question 2: Do consultees have any further suggestions for future access service provision? If so please provide the rationale for these suggestions:

AD could quite easily be funded by having less intrusive background music, which generally no one likes.
