

**Question 1: Which of the three options do consultees favour, and why?:**

Option 2. Working in the social care sector I find an increasing number of older people are becoming blind or partially sighted. This trend is set to increase as people continue to live longer. Option 2 is the beginning but full access needs to be considered for the future. Blindness or partial sight affects quality of life and well being.

**Question 2: Do consultees have any further suggestions for future access service provision? If so please provide the rationale for these suggestions:**

Access should be for everything. Blindness or partial sight is increasing as people live longer. This affects their quality of life. Place yourself in a dark room and feel the isolation.
