

**Question 1: How should Ofcom manage the process of taking advice from users, regulators and government on efficient apportionment of AIP fees in the maritime and aeronautical sectors? Are any new institutional arrangements needed?:**

No comment

**Question 2: If you consider that our proposals for pricing ground station users for any spectrum would be likely to have a detrimental impact on safety, please let us know. In order for us to understand your assessment fully, it would be helpful if you could outline the mechanisms whereby this might happen.?:**

I believe that it is totally wrong for charitable organisations which operate solely, or largely, to provide search & rescue, or similar emergency services to be charged anything other than a very nominal charge for using land based stations. These organisations achieve no gain from the services they operate, and which would have to be provided by the state if they did not exist.

**Question 3: Do you have any evidence which indicates that AIP charged to ground stations could have a material detrimental impact on UK competitiveness?:**

no comment

**Question 4: Taking into account the information available in this document, including that set out in Annex 5, our initial views on VHF radiocommunications licence fees and on the reference rates for bands in other uses, and any information you have about the organisations to whom we are proposing to charge fees, please provide any evidence that you think is relevant to us in considering the financial impact of the fees we intend to propose for VHF radiocommunications, or for other uses:**

It would be totally unacceptable to levy increased charges on organisations such as the RNLI. All their income is raised from voluntary sources (and I know because I am a fundraiser for the RNLI) and to raise an extra significant sum from the public to simply pay for a facility that already is in use (i.e., no extra benefit to either the RNLI or those assisted) would be a travesty. If the lifeboat service was not funded by public generosity, it would have to be paid for by the government.

**Question 5: Do you agree that there is little to be gained, in terms of economic efficiency, from charging AIP to WT Act licences for aircraft:**

no comment

**Question 6: Do you consider that we should discount fees for any particular user or type of user? Specifically, do you consider that there**

**should be a discount for charities whose object is the safety of human life in an emergency:**

I consider they should be significantly discounted, to a nominal level - or ideally, exemption.

**Question 7: Do you agree that Ofcom should apply AIP to ground stations? use of maritime and aeronautical VHF radiocommunications channels, to help manage growing congestion in current use and to ensure that the cost of denying access to this spectrum by potential alternative applications is faced by current users?:**

I agree the spectrum has to be managed

**Question 8: Do you agree with our initial view that it would be appropriate to apply a pricing system similar to that already existing for Business Radio licences to maritime and aeronautical VHF communications? If not, what are your reasons for proposing that we should develop a fee structure for maritime and aeronautical VHF channels which is distinct from that already established for Business Radio?:**

not qualified to comment

**Question 9: Are there any short term reasons specific to the sector(s) why it would be inappropriate to apply fees from April 2009?:**

For the reasons stated above, increased fees should not be applied to charitable organisations who provide safety and rescue services.

**Question 10: Ofcom would welcome stakeholders' views on the factors which should be taken into account when apportioning fees between individual users of radars and racons:**

no comment

**Question 11: Do you agree with our initial view that a reference rate of £126k per 1 MHz of national spectrum for L band and S band radar spectrum would achieve an appropriate balance between providing incentives to ensure efficient use of spectrum while guarding against the risks of regulatory failure in setting the reference rate too high? If you consider a different rate would be more appropriate, please provide any evidence that you think we should take into account.:**

**Question 12: Do you agree with our initial view that a reference rate of £25k per single MHz of national spectrum would be appropriate for deriving fees for licences to use X band radar?:**

**Question 13: Do you agree that, generally, spectrum used by aeronautical radionavigation aids is currently uncongested? Do you believe that this may change during the next few years and, if so, approximately when?:**

**Question 14: Do you agree with the basis on which Ofcom has arrived at its initial view on reference rates for aeronautical radionavigation aids?:**

**Comments:**

I have commented only on the questions I feel qualified to to.
