

Question 1: How should Ofcom manage the process of taking advice from users, regulators and government on efficient apportionment of AIP fees in the maritime and aeronautical sectors? Are any new institutional arrangements needed?:

Question 2: If you consider that our proposals for pricing ground station users for any spectrum would be likely to have a detrimental impact on safety, please let us know. In order for us to understand your assessment fully, it would be helpful if you could outline the mechanisms whereby this might happen.?:

anything which impinges on an emergency service member's situational awareness has to be seen as detrimental. if these organisations are billed for access then administrative managers will inevitably be tempted to modify usage practices in order to balance budgets.

when a resource is unquantified as to price then economies cannot be made.

Question 3: Do you have any evidence which indicates that AIP charged to ground stations could have a material detrimental impact on UK competitiveness?:

Question 4: Taking into account the information available in this document, including that set out in Annex 5, our initial views on VHF radiocommunications licence fees and on the reference rates for bands in other uses, and any information you have about the organisations to whom we are proposing to charge fees, please provide any evidence that you think is relevant to us in considering the financial impact of the fees we intend to propose for VHF radiocommunications, or for other uses:

Question 5: Do you agree that there is little to be gained, in terms of economic efficiency, from charging AIP to WT Act licences for aircraft:

Question 6: Do you consider that we should discount fees for any particular user or type of user? Specifically, do you consider that there should be a discount for charities whose object is the safety of human life in an emergency:

yes, all organisations whose roles are either operational or supportive in the fields of safety and security, in times of emergency and during training and applying preventative measures should not just enjoy discounts but even be wholly exempted. commercial use across the entire communications spectrum should subsidise the infrastructure and maintenance and failing that, government.

if i might be allowed to illuminate with a land based example from my experience here in australia.

the fire brigade naturally engages a bushfire disaster but many smaller services act in support who might not be identified as an emergency service. my prime example would be the salvation army. similarly large rural farms (or 'stations') often own and

make available water tankers which become private appliances on the fireground. radio and pager communication in common with the control agency is therefore critical to safety

Question 7: Do you agree that Ofcom should apply AIP to ground stations? use of maritime and aeronautical VHF radiocommunications channels, to help manage growing congestion in current use and to ensure that the cost of denying access to this spectrum by potential alternative applications is faced by current users?:

no

Question 8: Do you agree with our initial view that it would be appropriate to apply a pricing system similar to that already existing for Business Radio licences to maritime and aeronautical VHF communications? If not, what are your reasons for proposing that we should develop a fee structure for maritime and aeronautical VHF channels which is distinct from that already established for Business Radio?:

on principle, no but i have insufficient local knowledge to comment in depth.

Question 9: Are there any short term reasons specific to the sector(s) why it would be inappropriate to apply fees from April 2009?:

Question 10: Ofcom would welcome stakeholders? views on the factors which should be taken into account when apportioning fees between individual users of radars and racons:

Question 11: Do you agree with our initial view that a reference rate of £126k per 1 MHz of national spectrum for L band and S band radar spectrum would achieve an appropriate balance between providing incentives to ensure efficient use of spectrum while guarding against the risks of regulatory failure in setting the reference rate too high? If you consider a different rate would be more appropriate, please provide any evidence that you think we should take into account.:

Question 12: Do you agree with our initial view that a reference rate of £25k per single MHz of national spectrum would be appropriate for deriving fees for licences to use X band radar?:

Question 13: Do you agree that, generally, spectrum used by aeronautical radionavigation aids is currently uncongested? Do you believe that this may change during the next few years and, if so, approximately when?:

Question 14: Do you agree with the basis on which Ofcom has arrived at its initial view on reference rates for aeronautical radionavigation aids?:

Comments:

even though i live in australia i am still a british citizen who considers himself a subject of the greater commonwealth. i feel that qualifies me to submit comment.
