

Question 1: How should Ofcom manage the process of taking advice from users, regulators and government on efficient apportionment of AIP fees in the maritime and aeronautical sectors? Are any new institutional arrangements needed?:

Consultation with charitable bodies that are involved in the saving of lives should be considered

Question 2: If you consider that our proposals for pricing ground station users for any spectrum would be likely to have a detrimental impact on safety, please let us know. In order for us to understand your assessment fully, it would be helpful if you could outline the mechanisms whereby this might happen.?:

Charitable organisations involved in live saving activities are generally funded purely from voluntary donations, the introduction of spectrum pricing would put added pressure on already stretched resources. MR teams would have to seriously review their current band plan and look at dropping some channels in order to save costs, this may potentially endanger lives.

Question 3: Do you have any evidence which indicates that AIP charged to ground stations could have a material detrimental impact on UK competitiveness?:

No

Question 4: Taking into account the information available in this document, including that set out in Annex 5, our initial views on VHF radiocommunications licence fees and on the reference rates for bands in other uses, and any information you have about the organisations to whom we are proposing to charge fees, please provide any evidence that you think is relevant to us in considering the financial impact of the fees we intend to propose for VHF radiocommunications, or for other uses:

As stated above in answer to question 2, MR teams have finite resources, with many demands on them. Communications are an integral part of any rescue and in some cases can mean the difference between life and death. It is therefore unacceptable to propose charging for radiocommunications, that may endanger life.

Question 5: Do you agree that there is little to be gained, in terms of economic efficiency, from charging AIP to WT Act licences for aircraft:

I would say that there is little to be gained in terms of economic efficiency for charging MR teams

Question 6: Do you consider that we should discount fees for any particular user or type of user? Specifically, do you consider that there

should be a discount for charities whose object is the safety of human life in an emergency:

Yes a 100% discount

Question 7: Do you agree that Ofcom should apply AIP to ground stations? use of maritime and aeronautical VHF radiocommunications channels, to help manage growing congestion in current use and to ensure that the cost of denying access to this spectrum by potential alternative applications is faced by current users?:

Yes but only to commercial organisations, i.e excluding organisations that are involved in the preservation/saving of lives

Question 8: Do you agree with our initial view that it would be appropriate to apply a pricing system similar to that already existing for Business Radio licences to maritime and aeronautical VHF communications? If not, what are your reasons for proposing that we should develop a fee structure for maritime and aeronautical VHF channels which is distinct from that already established for Business Radio?:

This is outwith the scope of our charitable organisation

Question 9: Are there any short term reasons specific to the sector(s) why it would be inappropriate to apply fees from April 2009?:

This is outwith the scope of our charitable organisation

Question 10: Ofcom would welcome stakeholders? views on the factors which should be taken into account when apportioning fees between individual users of radars and racons:

This is outwith the scope of our charitable organisation

Question 11: Do you agree with our initial view that a reference rate of £126k per 1 MHz of national spectrum for L band and S band radar spectrum would achieve an appropriate balance between providing incentives to ensure efficient use of spectrum while guarding against the risks of regulatory failure in setting the reference rate too high? If you consider a different rate would be more appropriate, please provide any evidence that you think we should take into account.:

As stated previously I do not agree that any charges should be levied on organisations that are involved in saving of lives

Question 12: Do you agree with our initial view that a reference rate of £25k per single MHz of national spectrum would be appropriate for deriving fees for licences to use X band radar?:

Not if this affects MR Teams

Question 13: Do you agree that, generally, spectrum used by aeronautical radionavigation aids is currently uncongested? Do you believe that this may change during the next few years and, if so, approximately when?:

I am not qualified to answer this

Question 14: Do you agree with the basis on which Ofcom has arrived at its initial view on reference rates for aeronautical radionavigation aids?:

I am not qualified to answer this

Comments:

No charging of UK SAR frequencies
