

**Question 1: How should Ofcom manage the process of taking advice from users, regulators and government on efficient apportionment of AIP fees in the maritime and aeronautical sectors? Are any new institutional arrangements needed?:**

Ofcom should listen to user representatives such as RYA and individual users of radio communications

**Question 2: If you consider that our proposals for pricing ground station users for any spectrum would be likely to have a detrimental impact on safety, please let us know. In order for us to understand your assessment fully, it would be helpful if you could outline the mechanisms whereby this might happen.?:**

Marinas, Harbour Authorities and Sailing Clubs provide a safety link for yachts at sea. Advising if berthing is available or entry is possible for a vessel at sea. This may affect a passage plan and safe arrival of the vessel and so should be available without cost to the land based station.

**Question 3: Do you have any evidence which indicates that AIP charged to ground stations could have a material detrimental impact on UK competitiveness?:**

No

**Question 4: Taking into account the information available in this document, including that set out in Annex 5, our initial views on VHF radiocommunications licence fees and on the reference rates for bands in other uses, and any information you have about the organisations to whom we are proposing to charge fees, please provide any evidence that you think is relevant to us in considering the financial impact of the fees we intend to propose for VHF radiocommunications, or for other uses:**

The financial impact will depend on the level of fees charged.  
This is unpredictable. I do not feel it will have an effect on the total usage of the frequencies allocated and it is therefore unnecessary to charge in an attempt to control the traffic on these frequencies.

**Question 5: Do you agree that there is little to be gained, in terms of economic efficiency, from charging AIP to WT Act licences for aircraft:**

No experience in this field but the same safety agreements must apply to aircraft as to vessels at sea.

**Question 6: Do you consider that we should discount fees for any particular user or type of user? Specifically, do you consider that there**

**should be a discount for charities whose object is the safety of human life in an emergency:**

I feel you should give up the whole idea of charging for use of the airwaves where safety is concerned.

**Question 7: Do you agree that Ofcom should apply AIP to ground stations? use of maritime and aeronautical VHF radiocommunications channels, to help manage growing congestion in current use and to ensure that the cost of denying access to this spectrum by potential alternative applications is faced by current users?:**

No

**Question 8: Do you agree with our initial view that it would be appropriate to apply a pricing system similar to that already existing for Business Radio licences to maritime and aeronautical VHF communications? If not, what are your reasons for proposing that we should develop a fee structure for maritime and aeronautical VHF channels which is distinct from that already established for Business Radio?:**

No because the base stations are communicating with vessels which have no other reliable means of contact with the ground.

**Question 9: Are there any short term reasons specific to the sector(s) why it would be inappropriate to apply fees from April 2009?:**

No. this is a long term plan. It is inappropriate to charge fees at all.

**Question 10: Ofcom would welcome stakeholders' views on the factors which should be taken into account when apportioning fees between individual users of radars and racons:**

These facilities are provided for safety and should be available without charge.

**Question 11: Do you agree with our initial view that a reference rate of £126k per 1 MHz of national spectrum for L band and S band radar spectrum would achieve an appropriate balance between providing incentives to ensure efficient use of spectrum while guarding against the risks of regulatory failure in setting the reference rate too high? If you consider a different rate would be more appropriate, please provide any evidence that you think we should take into account.:**

No

**Question 12: Do you agree with our initial view that a reference rate of £25k per single MHz of national spectrum would be appropriate for deriving fees for licences to use X band radar?:**

No

**Question 13: Do you agree that, generally, spectrum used by aeronautical radionavigation aids is currently uncongested? Do you believe that this may change during the next few years and, if so, approximately when?:**

No knowledge of this.

**Question 14: Do you agree with the basis on which Ofcom has arrived at its initial view on reference rates for aeronautical radionavigation aids?:**

No opinion

**Comments:**

Use of the radio spectrum is essential for safety when out of range of other communication methods ( e.g.mobile phone/landline) I do not believe there is evidence of overuse of the existing frequencies leading to failure of communications. Charging may improve revenues but will not improve safety or reduce useage.
