

What are your comments on these proposals?

Long Wave transmissions must not be terminated

Medium wave transmissions must not be terminated

FM transmissions must not be terminated

The reasons for this are that AM (LW + MW) transmissions can be received on the most rudimentary receivers which is very appropriate in times of emergency.

AM time signals are in true in real time, unlike those in DAB - we must have an accurate and available real time signal.

FM must be retained for its clarity and fidelity, which isn't available on DAB.
