Organisation (if applicable):

Gravity FM

What are your comments on these proposals?:

Analogue frequencies have been the mainstay of radio since radio began. FM has and still is the highest quality for audiophiles and should not be terminated. Digital radio is still doubt as to the correct format whilst analogue remains constant. The whole world relies on analogue for many services and this should remain. On a more personal note, I have for the last 10 years been involved in RSL broadcasts for my local community and am in preparation for applying for a full time community radio licence. All licenced community radio services are on analogue frequencies and the digital option does not exist. For the broadcaster and the listener it should be a choice not a demand. Why ruin what is already an accepted and reliable method of transmission?
