

RadTronix

Question 1

Do stakeholders agree with the proposals for the award of licences in the 10GHz, 28GHz and 32GHz bands in 2007?

Answer 1: I do not agree with the proposals in respect of the 10GHz band because of the impact on the amateur radio allocation in that band.

Question 2

Do stakeholders agree with the proposal to include in the award of the 32GHz band that portion of the band that has been open since 2003 for point-to-point applications?

Answer 2:

Question 3

Do stakeholders agree with the proposal to defer the release of the 40GHz band and review the position in two years' time?

Answer 3:

Question 4

Do stakeholders have any other comments on the contents of this document?

Answer 4: The permitted use of high power commercial satellite operation within the 10GHz band is in my opinion wholly unfair. Commercial operation within the 10GHz band will have a detrimental effect on the existing amateur allocation. Many radio amateurs have contributed to the development of the communications systems that we enjoy today. Erosion of the amateur bands as a result of the sale of bandwidth and the lack of protection of the amateur service from harmful interference should therefore not be permitted. If it is essential that the amateur bands are to be sold in this manner then steps should be taken to offer full protection to the remaining amateur allocations.
