

Les Hunter

In 1945 I had the morse code drummed into me and became a radio operator. Then I became a radar technician and I learnt about valves, resistors capacitors, etc. Chain Home boffin. I left the forces in 1955 and began repairing Radios, Televisions. Then came colour T.V. so I learnt about that, along with boolean algebra, Binary arithmetic and digital then came I.C,s so I had to learn about those and spent the last ten years of my working life in an electronics lab. I started with a Sinclair ZX and learnt "Basic" Programming.

Then came Microsoft.----- when things don't work I want a book with instructions and somewhere I can get help through the mail not having to download Drivers and instruction books. When things are not working I want clear precise instructions in a book that came with the software or hardware, less built-in obsolescence There is a limit to what the brain can take
